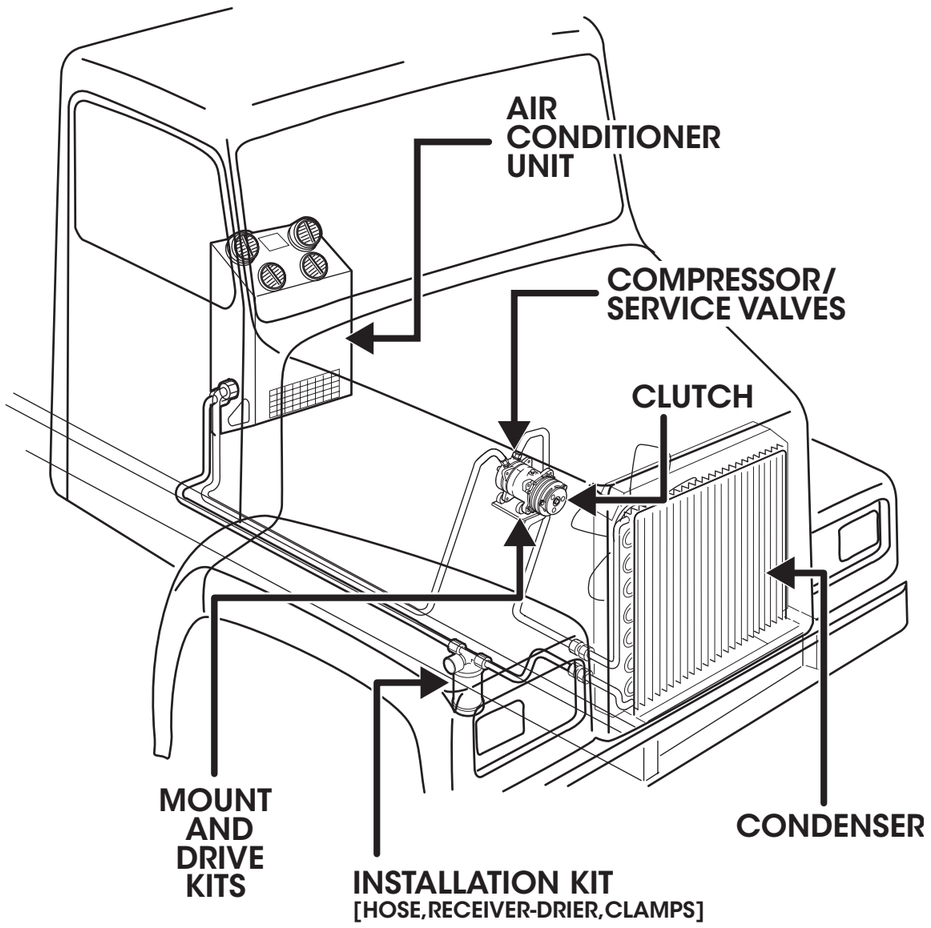
HEATING & AIR CONDITIONING
UNITS & ALL MAKES PARTS

RedDotCorp.com



UNITS Each unit has been designed for on-road or off-road use. Most are universal in application but vary as to how they are mounted (rooftop, horizontal or vertical surfaces).

CONDENSERS The condenser cools hot refrigerant gas to a liquid. The cooler the refrigerant is when it gets to the air conditioning unit, the more effective the system. This lowers system pressure and can extend compressor and clutch life.

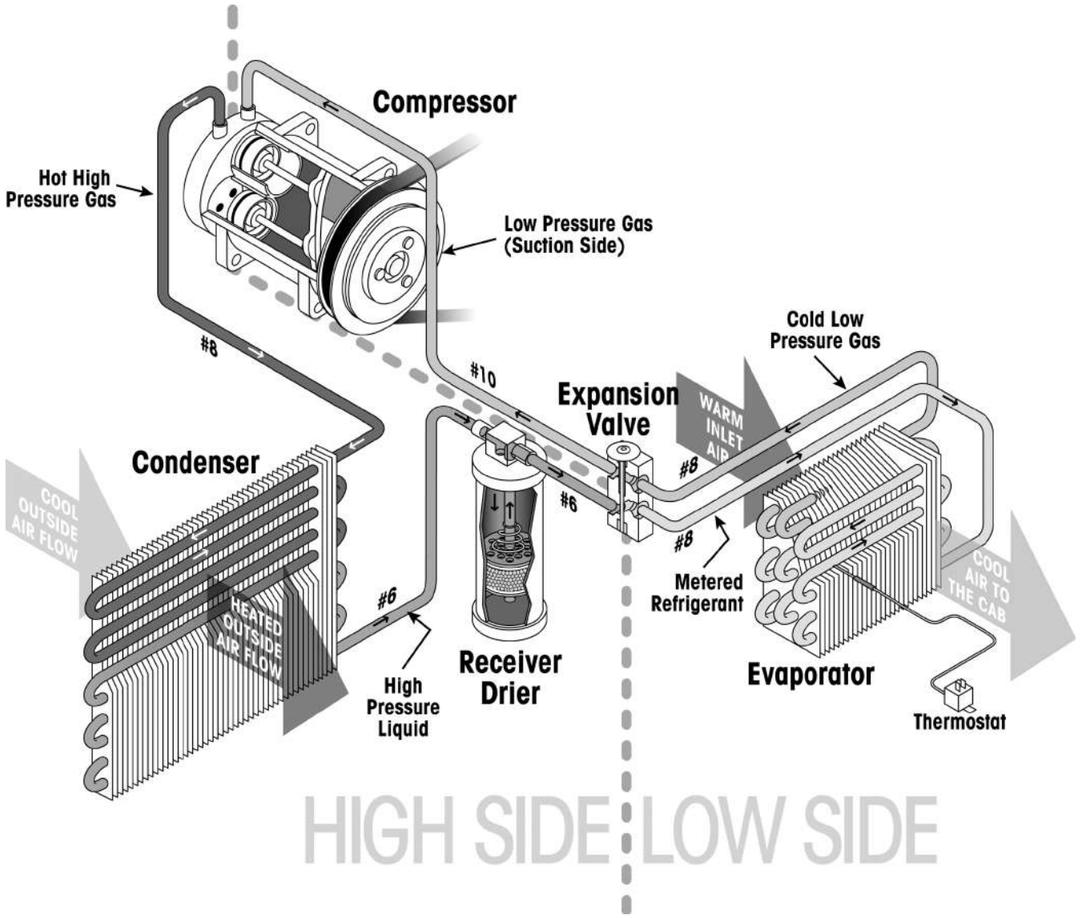
Three types of condensers are available from Red Dot: radiator, roof and remote mount. The radiator-mounted style (can be hood-mounted as a grilldenser) will be the least costly as it does not need a separate motor-fan assembly and refrigerant hoses are shorter in length.

INSTALLATION KITS These kits have been designed to simplify the ordering of all the small parts necessary to complete an installation. A typical kit includes refrigerant hose, refrigerant fittings, receiver-drier (high capacity) with mounting bracket, clamps, tie wraps, nuts and bolts as required. A trinary or binary switch may also be included with certain kits.

COMPRESSOR, CLUTCHES, SERVICE VALVES Red Dot offers a variety of compressor choices. The traditional two-cylinder compressor is available with a cast aluminum body (CCI/York 210). When using these compressors the clutch and service valves must be ordered separately.

Rotary compressors manufactured by Sanden or Que are available in 8 and 10 cubic inch capacity. The clutch is included but service valves must be ordered separately. The shape of rotary compressors typically allows installation in a more confined space. Rotary compressors also tend to be smoother-running (less vibration).

TYPICAL PLUMBING SCHEMATIC



Air Conditioner components are connected together to illustrate system operation. The components shown are not to scale. The refrigerant and refrigerant oil are clear in color and not visible in this drawing; however, we've attempted to suggest temperature variants through the use of values of gray in the pipeline. The small arrows inside the components and connecting hoses show the direction of refrigerant flow (refrigerant circuit).

E-6100 Rooftop

Electric Air Conditioner Unit

Red Dot has created an electric rooftop unit for use on heavy, medium and light duty trucks, construction and agricultural cabs. the E-6100 electric rooftop air conditioner is a self-contained unit incorporating a condenser, compressor and evaporator core.

Low profile ceiling plenum blends with any interior.

Electric Remote Mount Condenser

The DC Electric A/C Compressor Assembly is the most robust and most flexible unit on the market today. Unlike other A/C solutions that require the vehicle to cool completely, struggle to properly maintain temperature, or operate at full capacity at all times, the DC Electric A/C Compressor Assembly provides maximum cooling when it's needed, yet saves energy when it's not. The variable displacement compressor automatically cycles back as the temperature in the cabin cools, reducing its electric load. Its heavy cast aluminum structure keeps the weight down while providing durability for the most extreme environments. The heavy-duty brushless motor runs with ease at a fixed speed, keeping this compressor assembly maintenance-free through years of rough use. The internal controller monitors the low and high pressure to protect the compressor, and includes the ability to operate the compressor system through CAN and LIN communication.

R-6101 Rooftop

Air Conditioner Unit

COMMERCIAL TRUCKS • CONSTRUCTION • AGRICULTURE

Our engineers set out to create a sleek, low profile housing that would look right at home on today's truck and heavy-equipment cabs. The injection-molded housing has pockets to hold the receiver drier, blower assembly, and evaporator core, so they're simpler to replace. A 12-inch Spal fan, dual-scroll/dual-inlet Spal blower, rifled-tube evaporator and a parallel flow condenser contribute to the improved performance.

The R-6101 is a lightweight, high-capacity unit with a styled low profile.

Low profile ceiling plenum blends with any interior.

INSTALLATION TIPS

Ideal for mounting vertically between the seats on the back wall of a truck cab, or the side wall of an off-highway cab on cabs where extra support is required to complete installation, mount Support kit RD-2-1398-0 should be used to simplify installation.

Notes: 1. Reinforcing may be required when mounting directly to cab wall
2. Due to the wide variety of conditions found in off highway applications, it is recommended that a trial installation be made to determine if these products are suitable to a particular application.

R-254-4 Configuration Shown with mounting legs, floor exit

R-254-0 Shown with mounting legs, rear exit

Tried and true, our R-254 (single-fan) and R-255 (double-fan) auxiliary heaters are among the most versatile and maintenance-free heaters you'll find. Their round-tube-and-fin design lets you mount these heaters in any position using our multi-position leg brackets or flush-mount frame, and their compact size, simple plumbing, and high output make them ideal for any application.

R-3500 HEATER

Auxiliary Heater

CRASH/FIRE/RESCUE • CREW CABS

The R-3500 crew cab heater was designed with high performance to be able to heat larger cabs in extreme conditions. Its low profile and heavy duty construction allows this heater to be used in various applications.

R-3500 SPECIFICATIONS	
BTUS	Heating – 49,000 BTU/Hr @ 180°F (kw 14.35 @ 82.2°C) temp. rise

R-3540 HEATERS

Auxiliary Heater

CRASH/FIRE/RESCUE • VAN • BUS

Designed for small spaces, the R-3540 delivers high capacity for its size. With a pancake fan design, this unit is quiet and moves close to 200 CFM of air. It has versatile mounting (flat or horizontal) and a resistor for variable speed control.

R-3540 SPECIFICATIONS	
BTUS	22,970 BTU/Hr @ 180°F (kw 6.73 @ 82.6°C) air temp. rise

Rooftop Condenser (24,000 BTU)

TRUCKS • CONSTRUCTION • AGRICULTURE

A compact, rugged rooftop condenser with a low profile for cabs with minimal roof space or aerodynamic fairings.

R-6160 SPECIFICATIONS	
CAPACITY	24,000 BTU's/hr (7 kW @ 65.5°C)
WEIGHT	23 lbs. (10.5 kg) Lightweight
CONDENSER COIL	The coil is aluminum fin and copper tube construction, which includes a tube of .022" (6 cm) wall thickness, results in an effective, lightweight rugged coil.
MOTOR/FAN	The motor is a permanent magnet type selected for its extended life. The fan is made of aluminum.
CURRENT DRAW	12 amps @ 13.6 VDC (includes 4 amps A/C for clutch) 6 amps @ 27.2 VDC (includes 2 amps A/C for clutch)

R-9720

Remote Mount Condenser (39,000 BTU)

CONSTRUCTION • MINING • AGRICULTURE

The R-9720 is the industry's most versatile and rugged remote-mount condenser. Its unique design allows installation on a horizontal surface or mounted below a roof or floor panel simply by changing two hose connectors. Suitable for off-highway applications, commercial trucks, or specialty vehicles where a radiator-mount or rooftop condenser cannot be used.

R-9720 SPECIFICATIONS	
CAPACITY	39,000 BTU/Hr. (8.8 kW)
WEIGHT	45 lbs. (16.8 kg)
CONDENSER COIL	Copper tubing, aluminum fins and plated steel headers
CURRENT DRAW	20.3 amps @ 13.6 VDC (includes 4 amps for A/C clutch) 16.3 amps @ 27.2 VDC (includes 2 amps for A/C clutch)
FAN	10-inch (25.4 cm) diameter, 4 blade fan with single speed long life motor

R-9725

Remote Mount Condenser (36,500 BTU)

CONSTRUCTION • MINING • AGRICULTURE

The R-9725's dual fans provide the capacity to handle any of Red Dot's auxiliary air conditioners. Can be mounted vertically or horizontally. Rock guard optional.

R-9725 SPECIFICATIONS	
CAPACITY	36,500 BTU/hr (9.7 kW)
WEIGHT	40 lbs. (18 kg)
CONDENSER COIL	Copper tubing, aluminum fins and plated steel headers
MOTORS	Single speed sealed permanent magnet
CURRENT DRAW	24 amps @ 13.6 VDC (includes 4 amps for A/C clutch) 12 amps @ 27.2 VDC (includes 2 amps for A/C clutch)

CONDENSER DESCRIPTIONS

CONDENSER COIL TYPE

SERPENTINE TYPE - Continuous extruded aluminum tube, ¾ to 2 inches thick. The fin is either skyve type or vacuum brazed ribbon type spaced approximately 14 fins per inch. High heat rejection, compact size exact O.E.M. replacements.

TUBE AND FIN TYPE - Constructed with .008 thick aluminum corrugated fin ¾ to 2 ½ inches in thickness. Fin spacing at 10 to 12 fins per inch providing maximum heat rejection. Tubes are either copper or aluminum.

GRILLDENSER TYPE - Constructed with .030 to .050 aluminum, fins are ¾ of an inch thick. Fins are spaced at 2 to 4 fins per inch providing minimal air flow restriction. Tubes are either .035" wall aluminum or .022" wall copper.

MULTI FLOW - Constructed with .0051 thick zinc coated cross flow tubes. Fin spacing is 14 fins per inch. Four pass design.

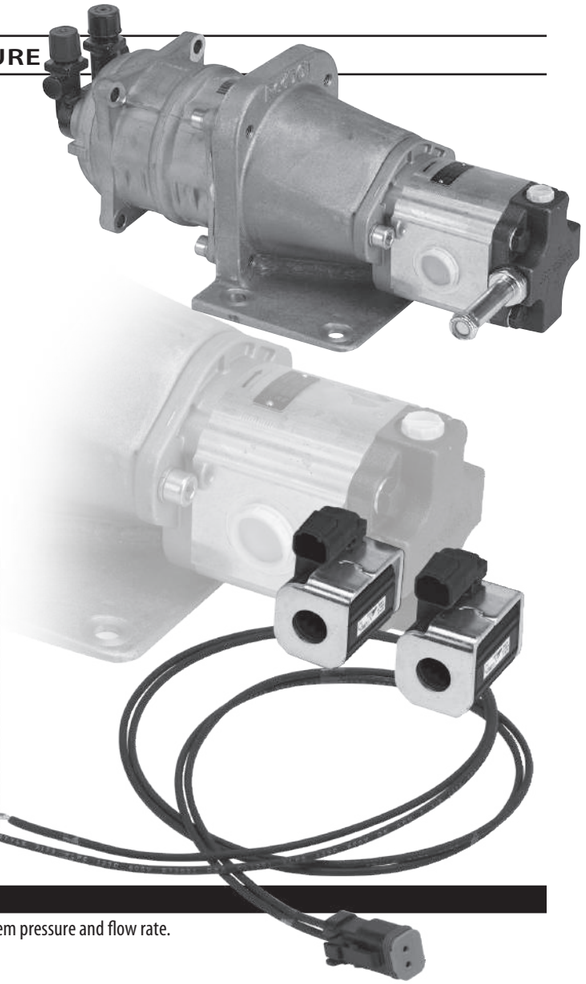
R-9976

Hydraulic Axial Direct Drive

CONSTRUCTION • MINING • AGRICULTURE



New for 2015, the updated R-9976 is now available in three different motor sizes:

R-9976-5P = 8cc/rev (same as current dash-3 assembly)

R-9976-6P = 14cc/rev

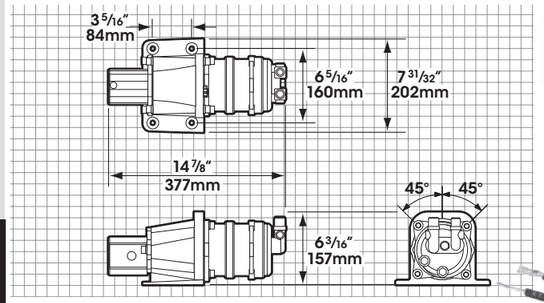
R-9976-7P = 23cc/rev

The new hydraulic motors have integrated on/off solenoid valve and bypass circuit offering greater hydraulic *flow* range flexibility and greater hydraulic *pressure* range flexibility.

Earlier versions used an external valve to control the flow of hydraulic fluid to the unit. Red Dot's new design has an on/off valve and bypass circuit built into the motor making it easier to connect only three hydraulic lines; earlier models required as many as seven lines. And the R-9976 requires no external control valves or bypass circuits.

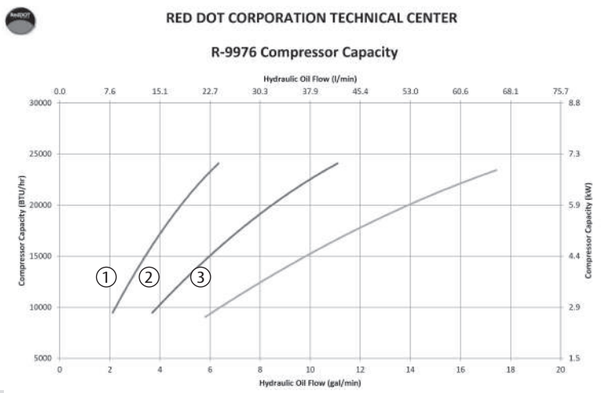
With fewer components and hydraulic connections, the new design is simpler to install and eliminates several potential leak points

Although the overall unit has a slightly larger footprint, the mounting plate is the same as previous installations.



HYDRAULIC FLOW AND PRESSURE CURVES

It is important to choose the correct assembly based on available hydraulic system pressure and flow rate.



Every R-9976 ships with both 12 and 24 volt coils and the wiring harness to connect it to your vehicle's electronics.

① R-9976-3,-4,-5
MIN FLOW 2 GPM (7.6 LPM)
MAX FLOW 6 GPM (22.7 LPM)

Pressurizer & Remote Mount Filters

Booster Blower

AGRICULTURAL • MINING • INDUSTRIAL

Attaching directly to the 78R5100 and 78R5110 remote mount filters (shown below) the Booster Blower forces dust free air into the cab through our heater and air conditioner units.

PRESSURIZER SPECIFICATIONS	
AIR FLOW	140 CFM (238m3/h) with filter; 230 CFM (391m3/h) free flow
WEIGHT	7 lbs. (3 kg)
MOTOR/FAN	One 12 VDC, single speed (24 VDC available)
CURRENT DRAW	10.2 amps @ 13.6 VDC 6 amps @ 27.2 VDC
DIMENSIONS	4" inlet 3" outlet
UNITS	**73R9202** (12 VDC) **73R9204** (24 VDC)

Remote Mount Filters

The integration of Red Dot's Remote Mount Filters with the Booster Blower guarantees your dust-free working environment.

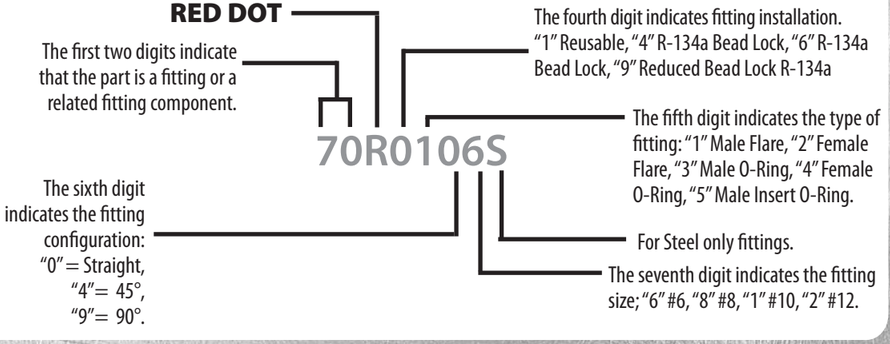
REFRIGERANT HOSE FITTING NUMBERING SYSTEM

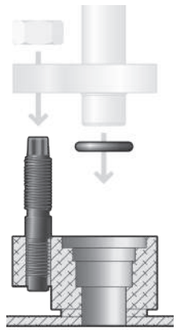


GUIDE TO FITTINGS

Circulating the refrigerant in an air conditioning system is more complex than the plumbing required for a heater. Circulating heated antifreeze and water only stresses the hoses and their connectors with around 15 psi. A fully charged and properly maintained a/c system sustains a much higher load. When the system is off it's in the neighborhood of 65-125 psi, when in use you'll see around 275 psi on the high-side and 35-40 psi on the low side. For that reason, greater care must be taken whenever working on an air conditioning system.

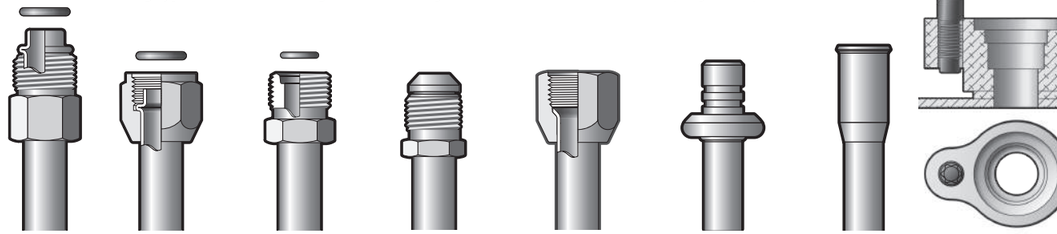
Recent environmental concerns have resulted in more stringent standards for connecting air conditioning hoses for vehicles and heavy equipment. This is particularly true for systems using R-134a refrigerant. R-134a is more likely to permeate or leak than the now retired R-12 refrigerant. Because of this it is very important to match the fitting with the correct hose. On the following pages you will find Red Dot recommendations for the correct hose/fittings combinations.

R-12 refrigerant was banned for manufacture in the United States on January 1, 1996. However, maintenance shops still find they need to support older systems. Any fitting that is suitable for R-134a will also work for older systems needing repair that use R-12.



Fitting Identification

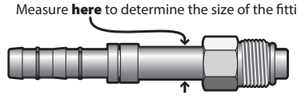
1. Determine the **Fitting Type**: male or female o-ring, male insert o-ring, male or female flare, male or female springlock, or pad.

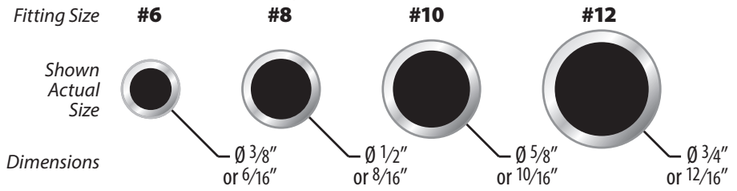


O-Ring Male | **O-Ring** Female | **Insert O-Ring** Male | **Flare** Male | **Flare** Female | **Springlock** Male | **Springlock** Female | **Pad Mount** Female

2. Determine the **Fitting Size**: measure the outside diameter (O.D.) of the tube directly behind the nut.
3. Check the hose-end size of the fitting. Measure the outside diameter of the part of the fitting that will insert in the hose. This is the same as the inside diameter (I.D.) of the hose.

Measure **here** to determine the size of the fitting





4. Is the fitting regular, step-up or step-down?
   Regular: the hose-end size is the same as the fitting size. For example, a #6 hose-end and a #6 fitting.
   Step-up: the hose-end size is larger than the fitting size. For example, a #8 hose-end and a #6 fitting.
   Step-down: the hose-end size is smaller than the fitting size. For example, a #6 hose-end and a #8 fitting.
5. Is the fitting straight, 45° or 90° ?
6. Is the connection to the hose EZ-Clip, Beadlock, Reduced Diameter Beadlock or reusable?

7. Are there **Charge Ports**?
Many refrigerant fittings have charge ports for use when checking pressures or evacuating or refilling an air conditioning system. They come in two types: a simple Schrader valve and a quick-disconnect valve.

R-12 Service Port
R-134a Switch Port

AEROQUIP® E-Z CLIP ASSEMBLY INSTRUCTIONS

Cut the Hose

Cut the hose to proper length with an appropriate cutting tool. Aeroquip's hand-held cutter (79R8930) has been specially designed for cutting all non-wire reinforced hose. Be sure the cut is made square to the hose length.

Slip Two Clips on the Hose

Slide two clips (be sure to use the correct size) onto the cut end of the hose. The orientation of the clips does not affect the performance of the connection. However, for ease of assembly, both clips should be oriented in the same direction. NOTE: If you don't slide the clips over the hose at this time, you will have to stretch the clips over the hose and fitting later. This may permanently damage the clip.

Oil the Nipple

Lubricate the nipple with a generous amount of the refrigeration or A/C system's compressor lubricating oil. This MUST be done to lower the force of nipple insertion.

Insert the Nipple into the Hose

Insert the nipple into the hose. To ensure that the nipple is fully inserted, check the gap between the cut end of the hose and the shoulder of the nipple. Care should be taken to avoid kinking or other damage to the hose during this step. NOTE: Be sure to wipe excess oil from the nipple and hose.

Snap on the Cage

Snap the cage into the groove on the nipple. The arms of the cage should extend over the hose-covered length of nipple. When the cage has been correctly installed in the cage groove, the cage will be able to rotate in the groove. This step MUST be performed to ensure that:

1. The clips will be located over the O-Rings on the nipple.
2. The connection will be compatible with the connection's pressure rating.

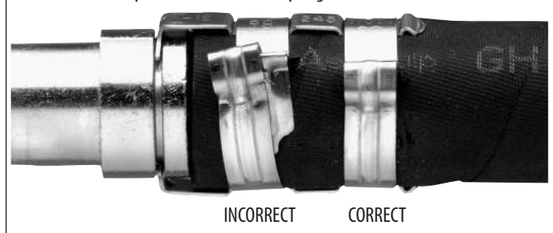
Position the Clips

Slide the clips over the cage arms and into the channels on each arm of the cage.

Close the Clips

Using the Connecting Tool (79R8920) to close the clips. The tool should be positioned squarely on the clip connection points and should remain square as pressure is applied and the clip is closed.

The nose of the plier should be firmly seated under the assembly bump and lock latch. If the pliers are not kept square as you close the clip, the clasp may have an offset. Use the pliers to correct the clasp alignment.



NOTE: E-Z Clip components should not be reused.

All **Aeroquip E-Z Clip Refrigerant Fitting Kits** contain the fitting and all necessary cage, clips and o-rings. **Use with Aeroquip E-Z Clip hose ONLY**.

REFRIGERANT HOSE FITTINGS

For all **Refrigerant Fittings** be sure to use **Red Dot Refrigerant Hose** or equivalent.

CRIMP INSPECTION GUIDE

Always inspect crimps visually and dimensionally.

Visual Inspection

Visually inspect the first crimp to make sure that the correct dies were used, crimp location is correct, crimp is uniform, and there is no internal deformation of the fitting. A good crimp will be properly centered on the ferrule, meet the target depth dimension, and be symmetrical in shape.

What to look for:

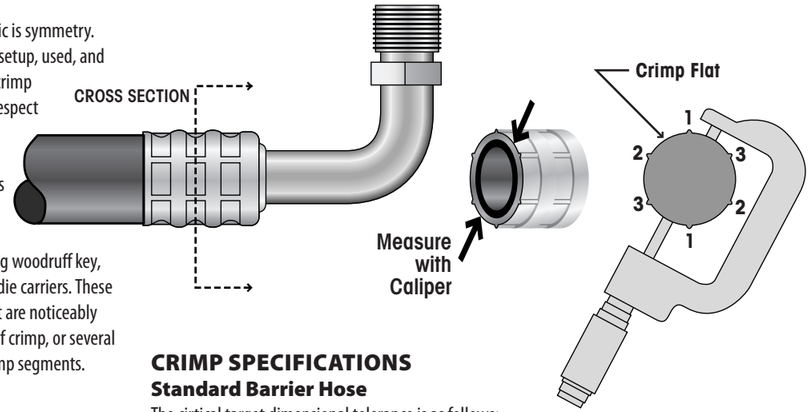
1) The first visual criteria for a good crimp is the location of the crimp rings on the ferrule. The instructions provided should produce a crimp that is well centered on the ferrule. The first crimp ring will be approximately ¼" from the open end of the ferrule.
2) The second visual characteristic is symmetry. When the Crimper is properly setup, used, and maintained, it will produce a crimp which is evenly shaped with respect to the crimp depths and the pinched ears in between. Many conditions in the process could cause an irregular crimp including: worn guide blocks, dies not seated, missing woodruff key, or deterioration in the plastic die carriers. These faults will produce crimps that are noticeably irregular with varying depth of crimp, or several prominent "ears" between crimp segments.

Dimensional Inspection

If the crimp is properly centered and regular, the crimp depth is the only remaining characteristic to check. The target dimensions can be measured with a set of blade or pin micrometers. The dimensional gauging should be used to verify the proper setup or when the tool is disassembled for maintenance. Gauges also should be used periodically during operation to verify continued acceptable crimps.

What to Measure

With the use of a micrometer measure across the diameter at the center of the crimp. The tooling manufacturer recommends checking in three locations: one reading on each of the three crimp bands, rotating the part to the next facet each time to assure checking each opposing die segment. In this manner each band and facet are checked.
NOTE: Using a Vernier Caliper may be an acceptable alternate gauge for the larger size fittings but not the smaller ones. Depending on ferrule size, the crimped "ears" may extend higher than the crimp diameter giving a false reading.



CRIMP SPECIFICATIONS

Standard Barrier Hose

The cirtical target dimensional tolerance is as follows:

Die Size	Target Diameter	Tolerance Range
#6	.660"	.650" to .675"
#8	.830"	.820" to .845"
#10	.936"	.926" to .951
#12	1.035"	1.025" to 1.050"

Reduced Barrier Hose

The cirtical target dimensional tolerance is as follows:

Die Size	Target Diameter	Tolerance Range
#6	.556"	.551" to .571"
#8	.640"	.635" to .655"
#10	.742"	.737" to .757
#12	.897"	.892" to .912"

It is normal for one of the three measurements to be close to the nominal target while the other two may be up to .010" larger, but still in tolerance.

This Crimp Inspection Guide is intended for use with fittings and Red Dot or Goodyear Galaxy™ hose, crimped with an 3700 crimper (79R1510 & 79R1515) only.

RED DOT REFRIGERANT HOSE

Galaxy 4826 Barrier Hose Type C Class II

RED DOT INTERNAL NYLON BARRIER

REDUCED OZONE PERMEATION.

Internal Nylon Barrier hose is specifically designed to reduce the permeation level of ozone-depleting refrigerant and chemicals in heavy duty air conditioning systems.

"UNIVERSAL" COMPATIBILITY.

Extensive testing has shown Red Dot Refrigerant Hose to be compatible with today's state-of-the-art refrigerants, including R-12, R-134a and Ternary Blends.

SLIMLINE/STAT-O-SEAL SERVICE KIT

79R8950 RD-5-12676-0P

This assortment of popular valve cores and seals fits today's various air conditioning parts including pad fittings for block valves, driers / accumulators, compressors, cores and parts where a positive seal is required. The seals in this kit are made from today's modern materials including Teflon, viton and elastomers which assure a positive seal.

Electrical & Refrigerant

Did You Know…

The **EXPANSION VALVE** meters refrigerant based upon evaporator heat loads. As the refrigerant gas leaving the evaporator passes through the valve's outlet port, gas temperature is sensed by the valve's internal sensing bulb and the refrigerant level is regulated.

Service Tip

The most common expansion valve failure mode is due to valve charge head leaks. System contaminants lodged in valve inlet orifice may also affect valve metering and flow capabilities. Suspected metering inconsistencies many times have distinct characteristics.

- Starving Expansion Valve: Frost present on inlet of evaporator.
- Flooding Expansion Valve: Hissing at valve upon system shutdown.

A manifold gauge set must be installed to confirm irregular system pressures.

ORDERING INFORMATION

These control designs provide a custom look by mounting into an existing control panel or the wall and flush with the interior lining.

71R5132 RD-3-21461-0P

Three-speed motor switch - includes A/C switch and electronic water valve

71R5212 RD-3-3751-1P

Heater-A/C Control - Three-speed motor switch with Red Dot Twin Temp™ Control

71R5600 RD-3-9379-0P

Three-speed motor switch - (requires manual water valve)

71R5605 RD-3-9379-1P

Three-speed motor switch - (requires electronic water valve)

71R5612 - 12V RD-5-17097-0P
71R5614 - 24V RD-5-17097-1P

Control Panel Kit – requires electronic water valve

71R5702 - 12V RD-5-17121-0P
71R5704 - 24V RD-5-17121-1P

Vertical Control Panel Kit – requires electronic water valve

71R5812 - 12V RD-6-5452-0P
71R5814 - 24V RD-6-5524-0P

Automatic Temperature Control Kit - (see next page for details)

71R5815 RD-2-6169-0P

Three-speed motor switch with A/C Switch

71R5817 RD-1-3659-0P

Heater control - Single speed motor switch - (requires manual water valve)

CONTROL PANELS

71R5819 RD-1-3660-0P

Heater control - Two-speed motor switch - (requires manual water valve)

71R5821 RD-1-3661-0P

Heater control - Three-speed motor switch - (requires manual water valve)

71R5822 - 12V RD-5-17093-0P
71R5824 - 24V RD-5-17093-1P

ATC Control Panel Kit – requires electronic water valve

71R5823 RD-1-3662-0P

Heater Control - Three-speed motor switch -
(requires electronic water valve 72R7110)

MAIN CAB CONTROLS – AUTOMATIC TEMPERATURE CONTROL (ATC)

The Automatic Temperature Control (ATC) is the latest in Red Dot control technology. ATC can be used in a myriad of applications offering sophisticated control technology. Check with your Red Dot Distributor regarding your particular application.
The ATC package includes:

- Touch pad controller
- Infinite fan speed manual control or Automatic fan speed control
- Electric water valve control
- Outside air temperature sensor
- Evaporator temperature sensor
- Duct outlet air sensor
- Cab temperature set point
- On board diagnostics
- Versatile mounting
- Solid state circuitry
- Dimensions: 7" x 2"

RED DOT BINARY™ PRESSURE SWITCHES

This switch assembly performs two distinct functions. The first function prevents the compressor from operating if system charge is lost or ambient temperature is too low. The second stops compressor if head pressure increases to unsafe levels. It automatically resets when pressure drops back to normal. Install Binary™ on liquid side of A/C system between condenser and expansion valve, for use with R-12 and R-134a.

RED DOT TRINARY™ PRESSURE SWITCHES - GENERATION II

This switch assembly performs three distinct functions. The first function prevents the compressor from operating if system charge is lost or ambient temperature is too low. The second stops compressor if head pressure increases to unsafe levels. It automatically resets when pressure drops back to normal. The third function is a shutter/fan override switch that keeps head pressure within normal range by opening shutters or operating engine fan to increase air flow across condenser when head pressure rises above set valve.

Install Trinary on liquid side of a/c system between condenser and expansion valve. For use with R-12 and R-134a systems.

RED DOT CABLE CONTROLLED WATER VALVES
WITH FLOW RESTRICTER

Red Dot has designed these water valves with a flow restricter.
The restricter reduces water flow to approximately 5 to 6 gallons per minute through the heater core.
The benefits are easier modulation, extended water valve life and maximized heater core efficiency.

73R4062 — RD-5-5614-0P

Single Speed
12 Volt
Permanent Magnet Motor
Strap / Stud Mounted, Span 2 5/16
Dimensions: 4" x 3 3/8" x 3 1/8"
Shafts: 5/16" diameter, length: 3 1/4"
Vented
Connector: Two conductor Packard terminal block #2971859, 1/4" blade terminal

73R4102 — RD-5-3780-0P

Three Speed
12 Volt
Field Wound Motor
Strap / Stud Mounted, Span 2 5/16
Dimensions: 4" x 3 13/32" x 3"
Shafts: 5/16" diameter, length: 3"
Vented
Connector: Four conductor
1/4" female spade

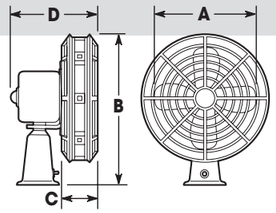
FANS

ALL PURPOSE FANS



The all purpose fan is designed to mount on either Horizontal (dash) or vertical (wall) surfaces. A unique spring loaded ball and socket allows easy adjustment of air direction, but once set remains in position. The 73R9052 fan blade has a matte black polypropylene fan guard and the 73R9062 uses a bright chrome metal wire guard.

74R SERIES

Receiver Driers

Accessories

Did You Know…

The primary function of a receiver drier is to remove moisture from the A/C system. Under normal operating conditions the drier canister should be warm to the touch. The presence of frost on the canister indicates an internal restriction. The A/C system is overdue for it's annual service interval.

Service Tip

System oil color can often provide us with some idea of compressor and internal system conditions.

- Black oil indicates carbonization caused by air (moisture) in the system.
- Brown oil indicates copper plating caused by moisture in the system.
- Grey or metallic oil indicates bearing wear or piston scoring. Piston scoring may be attributed to high head pressures caused by system moisture.

The presence of system moisture is detrimental to component service life and system reliability. When combined with refrigerant, moisture will result in the development of hydrochloric or hydrofluoric acid and attack (etch) metal surfaces in the refrigerant circuit.

Components in an air conditioning system require a clean, non-corrosive environment. Moisture is corrosive to air conditioner system components and must be eliminated for efficient a/c system operation. Any time the a/c system is opened, the receiver drier (or accumulator and orifice tube) needs to be replaced. A good preventative maintenance practice is to replace the receiver drier or the accumulator / orifice tube at regular intervals. See the **Preventive Maintenance Guide** at the beginning of the Reference Section in the back of this catalog.

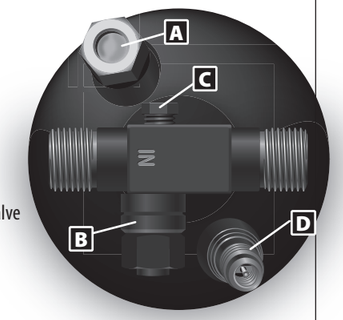
Receiver driers have a variety of maintenance components that may be installed to assist with receiver drier operation. Typically not all will be installed on a given unit. See the following pages that detail receiver drier features.

A. Moisture Indicator
Contains a litmus paper device which turns colors to designate the condition of the refrigerant;
Blue = normal;
Pink = moisture in the system;
White = very wet;
Gray = oil contamination

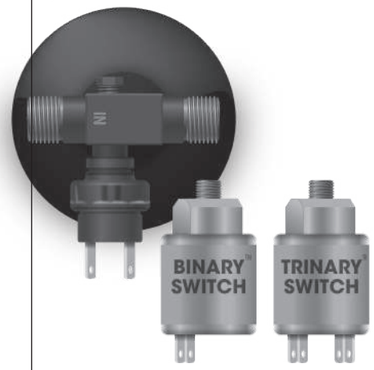
B. Pressure Relief Valve
A protection device designed to open and "bleed off" excessive pressure.

C. Fuse Plug
A fuse plug is a bi-metal device that melts down to release excessive pressure.

D. Schrader Valve / M-10 Valve
A gauge or charge port that allows access to the system for checking and charging refrigerant pressures.



Low / High Pressure Switches
A switch port allows for a male or female pressure switch to be added to the drier. The first function prevents the compressor from operating if the system charge is lost or ambient temperature is too low. The second stops the compressor if head pressure increases to unsafe levels. It automatically resets when pressure drops back to normal. A Binary Switch™ assembly performs both the above functions. Install Binary on liquid side of A/C system between condenser and expansion valve, for use with R-12 and R-134a.
A Trinary Switch™ switch assembly performs both functions detailed above. The third function is a shutter/fan override switch that keeps head pressure within normal range by opening shutters or operating engine fan to increase air flow across condenser when head pressure rises above set valve. A Trinary switch is also installed on the liquid side of a/c system between condenser and expansion valve. For use with R-12 and R-134a systems.



Maintenance Components
Shown on an O-Ring receiver drier with male / male connections. Not all receiver driers will have all these components; they may be combined in a wide variety of ways.

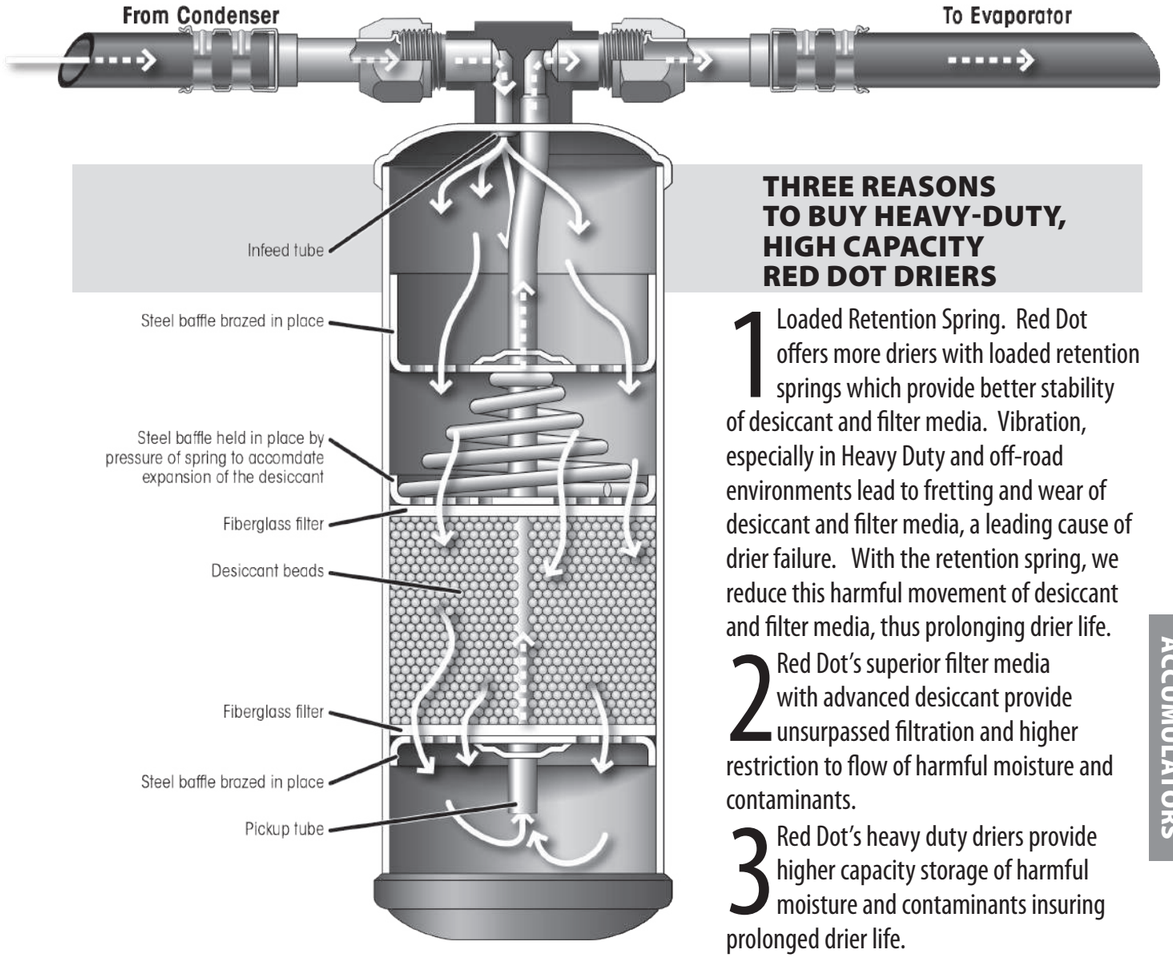
CUT-AWAY



THREE REASONS TO BUY HEAVY-DUTY, HIGH CAPACITY RED DOT DRIERS

1 Loaded Retention Spring. Red Dot offers more driers with loaded retention springs which provide better stability of desiccant and filter media. Vibration, especially in Heavy Duty and off-road environments lead to fretting and wear of desiccant and filter media, a leading cause of drier failure. With the retention spring, we reduce this harmful movement of desiccant and filter media, thus prolonging drier life.

2 Red Dot's superior filter media with advanced desiccant provide unsurpassed filtration and higher restriction to flow of harmful moisture and contaminants.

3 Red Dot's heavy duty driers provide higher capacity storage of harmful moisture and contaminants insuring prolonged drier life.

Receiver Driers are used on most heavy-duty air conditioning installations. It is mounted between the condenser and the expansion valve. It is composed of a tank, a filter, a drying agent (desiccant) and a pickup tube. An alternative device, commonly used on automobiles, is an Accumulator. Red Dot sells a variety of these. You will find them listed at the following our selection of Receiver Driers.

A receiver Drier serves two principle functions.
1 **Storage Tank**- The Receiver Drier *receives* liquid refrigerant from the condenser, caching it until it is needed by the evaporator.
2 **Refrigerant Drier**- The Receiver Drier contains a drying agent that absorbs moisture that may have accumulated in the liquid refrigerant. This drying agent, called desiccant, is usually in the form of beads of silica gel. Moisture is extremely harmful to air conditioning components.

The Receiver Drier's operation is very simple. As shown in the illustration, the liquid refrigerant enters the top chamber. It flows through a fiberglass filter pad (which also serves to hold the desiccant in place), then through the desiccant which removes any moisture in the refrigerant. It then flows through a second filter pad until it exits the Receiver Drier through the pickup tube at the bottom. The spring on the top of the desiccant chamber serves to give the desiccant room to expand as it absorbs the unwanted moisture.

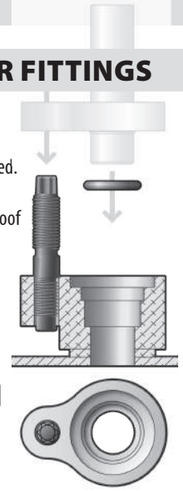
GUIDE TO ACCUMULATOR FITTINGS

Components in an air conditioning system require a clean, non-corrosive environment. Moisture is corrosive to air conditioner system components and must be eliminated for efficient a/c system operation. Any time the a/c system is opened, the accumulator and orifice tube need to be replaced. A good preventative maintenance practice is to replace the accumulator / orifice tube at regular intervals (at least once a year). A/C compressor manufacturer's warranties will be void without proof of flushing the system, accompanied by replacement of the accumulator and orifice tube when replacing a compressor.



Accumulators have a variety of connecting fittings, often connected to tubing designed for a specific application. Here are the different types of fitting connections you will experience while working with accumulators.

Compressors

Clutches, Mount Kits & Service Parts

Did You Know…

Poor system performance may be due to faulty compressor reed valves.

Service Tip

An internal hissing sound immediately after compressor shutdown indicates high side to low side pressure leakage. With manifold gauges attached, readings showing lower than normal discharge pressures and high suction pressures or a rapid stabilization of gauge readings shortly after shutdown indicate leaking reed valves or head gasket.

Service Procedures R-12 to R-134a Conversion

1. Connect R12 service equipment and recover R-12.
2. Thoroughly evacuate.
3. Remove R-12 service equipment.
4. Remove as much mineral oil as possible.
5. Change accumulator/drier and disturbed O-Rings to R-134a specifications.
6. Repair A/C system if required.
7. Add Ester Oil for R-134a.
8. Change service fittings to R-134a specifications.
9. Connect R134a equipment and evacuate.
10. Charge with R-134a.
11. Check cooling performance.
12. Change R12 labels to R-134a.

NOTICE: RETROFITTED TO R134a

⚠ CAUTION System to be serviced by qualified personnel. R-134a Refrigerant under high pressure.

Retrofit procedure performed to SAE J1661

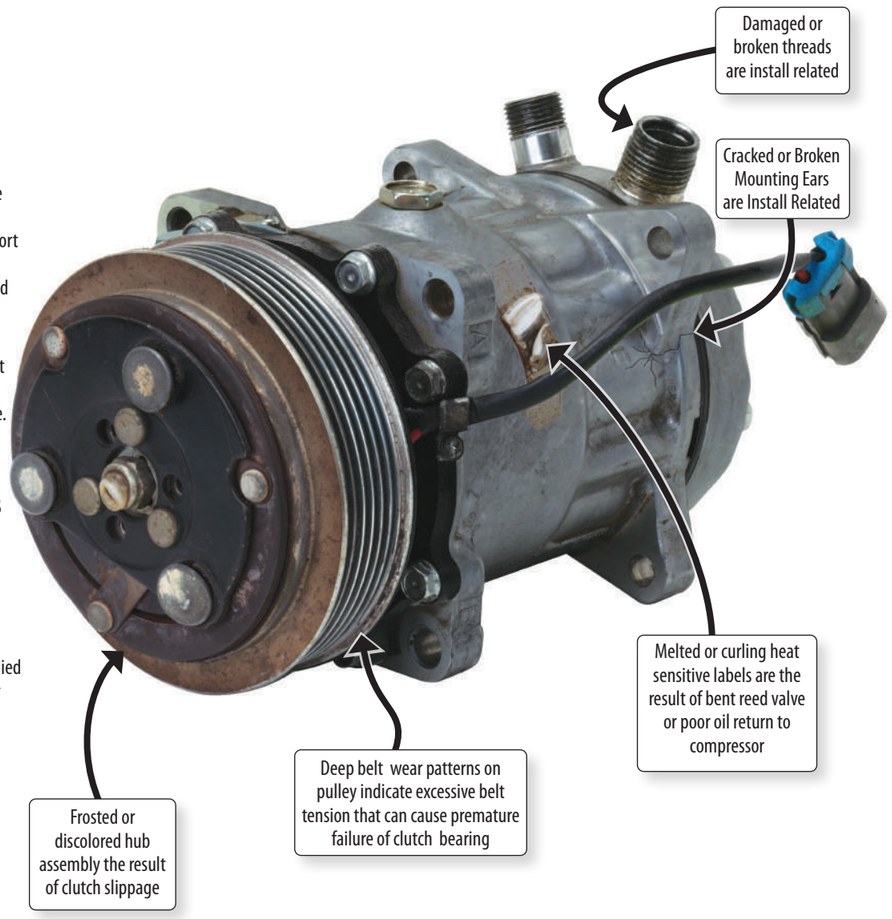
Compressor Troubleshooting Guide



To Bench Test Compressor Suction and Discharge Pressures.

1. Grasp clutch hub and Rotate compressor by hand. At the same time plug discharge port only with thumb or palm of hand. The compressor should begin to build discharge pressure while rotating.
2. Plug suction port and repeat the above step to confirm presence of suction pressure.

   Note: Absence of suction and/or discharge pressure.

Clutch Specifications

12 Volt clutch

Amperage draw 2.5 to 3 amps

Pull - in voltage 6 - 7 VDC

Working voltage 10.5 VDC

Note: less than 10.5 volts supplied to clutch coil during compressor operation will result in clutch slippage and eventual failure.

COMPRESSOR TROUBLESHOOTING GUIDE

WHAT TO LOOK FOR & HOW IT LOOKS

In a properly maintained air conditioning system, defects in materials or workmanship will typically surface shortly after the system has been put into service. Refer to oil table shown below for oil color and system condition.

	Things to check before accepting	Explanation
1	Mounting Ears	Fractured or broken compressor mount ears are install related, non-warrantable condition.
2	Heat Sensitive Labels	Overheat condition : Melted labels due to lack of oil return or bent reed valves due to liquid slugging, non-warrantable condition.
3	Compressor Rotation	Check compressor rotation for intermittent catches or seized condition.
4	Oil Level	Remove oil plug, there should be ½ to 1 ounce of oil left in compressor to perform oil inspection.
5	Oil Color and Condition	See oil color table shown below for compressor acceptance criteria.
6	Internal Center Ball Condition (Sanden Only) view through drain plug hole	Normal: Should be chrome color with no signs of dis-coloration from heat or gauling. Discolored center ball is generally the result of poor oil return to the compressor.
7	Clutch Hub (non-seized compressor only)	Should be no signs of frosting or discoloration from clutch slippage. Clutch slippage is the result of insufficient voltage, poor compressor ground, liquid slugging or rapid cycling, all are non-warrantable conditions.
8	No Suction or Discharge Pressure	Caused by bent or broken reed valves; non-warrantable..
9	Clutch "V" groove area	Deep belt wear patterns indicate excessive belt tension that can cause premature failure of clutch bearing.
10	Clutch Bearing	Rotation should be smooth with no rough spots.
11	Clutch pulley	Check for run-out should rotate truly with no visible wobble.
12	Suction/Discharge Port	Damaged or broken threads are install related.

Return Status	Oil Color	System Condition
Warrantable	**Clear**	Normal
Warrantable	**Clear Green**	Leak detection dye is present in oil
Warrantable	**Yellow**	Moisture may be present in A/C system
Warrantable	**Grey**	Normal failure, wear material from failed component suspended in compressor oil.
Non-Warrantable Condition	**Amber**	System contaminated and acidic. Contains copper ions from coils in evaporator and condenser.
Non-Warrantable Condition	**Black**	System contaminated, oil has turned black due to presence of carbon sediment caused by severely acidic system.

SANDEN'S NEW, FLEXIBLE COMPRESSOR SERIES – FLX7

FLX7 Features and Benefits

- The FLX7 utilizes interchangeable parts to increase flexibility and adaptability to a variety of vehicle applications. FLX7 compressors come standard with enhanced features previously found only on premium compressors. Features and benefits include:
- A variety of clutch rotor configurations: single, double, sealed heavy-duty and multi-groove rotors are available in 12 and 24 volt options.
- Each FLX7 comes with both a bullet and a sealed Packard clutch lead wire terminal for application flexibility.
- For protection, every FLX7 comes equipped with a pressure relief valve to guard against abnormal pressure conditions. A field coil diode is also included to prevent electrical damage caused by voltage surges.
- The FLX7 uses a standard GM pad-style cylinder head which receives a variety of port fittings ready to accommodate vertical and horizontal hose attachment. The port fittings are sold separately from the compressor, allowing the user to adapt a single compressor to fit many applications.
- Each port fitting is made of forged steel for superior strength vs. cast iron fittings.

SD7H15 Durability

- The FLX7 starts with the same SD7H15 compressor known throughout the automotive industry for its performance and durability.
- Seven cylinders for reduced operating pulsations, reduced noise and improved performance.
- Available in ear mount or direct mount configurations for flexibility and adaptability over a broad range of applications.
- Superior lubricating system for increased durability and high temperature performance.
- Heavy-duty bearing to handle higher pressures and loads.
- Shaft seal for greater leak protection and durability.

Typical Applications

- FLX7 are designed for use with:
- Light Passenger Vehicles
- Medium Duty and Heavy Trucks
- Construction Vehicles
- Agricultural Vehicles
- Passenger Buses

COMPRESSOR

IDENTIFYING CCI COMPRESSORS

The metal nameplate located at the top front of the compressor serves as a means of identification. The location permits viewing the nameplate with the clutch installed.

Data inscribed on the nameplate includes the serial number, combination model/part number, date of manufacture and type of refrigerant.

ENGINE MOUNT AND DRIVE ADAPTABILITY

IMPORTANT Minor modifications are occasionally necessary and are considered part of an installation. These kits are designed to fit vehicles with standard equipment. Each model adapter kit is thoroughly checked by installation of the bracket on a standard vehicle. The addition of special or optional equipment may interfere with normal installation. Compressor mounts are an accessory, and are of no concern to the engine manufacturer. Casting dimensions and bosses utilized in the bracket mounting vary as they are of no value to the engine manufacturer. Extra tolerances have been built into the bracket to compensate for these differences. It is important that proper pulley alignment be assured before final tensioning of the mounting bolts. If sufficient tolerance has not been allowed for that particular engine, further modification, such as elongating a hole or reshaping a strap, may be necessary to achieve proper alignment and fit. Some installations may require a slight modification or rearrangement of radiator mounting, gas or water lines for proper clearance. Trucks are quite often custom built, and you may find differences in the supplier of power steering and other accessory equipment. It may be necessary to purchase a special accessory pulley, which is not furnished in the kit, from the truck distributor.

Heater Cores & Evaporator Coils

Did You Know…

In addition to the **EVAPORATOR'S** primary function of removing heat from the cab area, the evaporator also acts as an air filter. As airborne particulate (dirt, dust & upholstery fibers) pass through the air intake stream it is removed by the condensation buildup on the evaporator's tubes and fins.

Under severe operating conditions, contaminants may not be washed away and result in a build up on the evaporator fins. The build up of contaminants reduces the evaporator's ability to absorb and remove cab heat and may restrict airflow.

Service Tip

To maintain evaporator performance, include on preventative maintenance schedule and carefully clean debris off the fin area as required. Special care should be taken not to bend or damage evaporator fins in the process.

Condensers

Passive & Powered

Did You Know…

The presence of dust, bugs and debris on the face of the condenser fin and tubes will create a thermo-barrier. In turn, the condenser's ability to dissipate heat is reduced resulting in poor system performance

Service Tip

To maintain condenser performance, include the condenser on preventative maintenance schedule and clean debris off the fin area. Special care should be taken not to bend or damage condenser fins in the process.

CONDENSER DESCRIPTIONS

CONDENSER COIL TYPE

SERPENTINE TYPE - Continuous extruded aluminum tube, ¾ to 2 inches thick. The fin is either skyve type or vacuum brazed ribbon type spaced approximately 14 fins per inch. High heat rejection, compact size exact O.E.M. replacements.

TUBE AND FIN TYPE - Constructed with .008 thick aluminum corrugated fin ¾ to 2 ½ inches in thickness. Fin spacing at 10 to 12 fins per inch providing maximum heat rejection. Tubes are either copper or aluminum.

GRILLDENSER TYPE - Constructed with .030 to .050 aluminum, fins are ¾ of an inch thick. Fins are spaced at 2 to 4 fins per inch providing minimal air flow restriction. Tubes are either .035" wall aluminum or .022" wall copper.

MULTI FLOW - Constructed with .0051 thick zinc coated cross flow tubes. Fin spacing is 14 fins per inch. Four pass design.

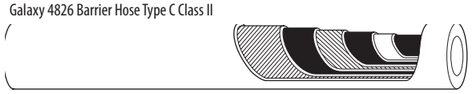
RED DOT REFRIGERANT HOSE

Galaxy 4826 Barrier Hose Type C Class II



RED DOT INTERNAL NYLON BARRIER

Reduced Ozone Permeation.
Internal Nylon Barrier hose is specifically designed to reduce the permeation level of ozone-depleting refrigerant and chemicals in heavy duty air conditioning systems.

"Universal" Compatibility.
Extensive testing has shown Red Dot Refrigerant Hose to be compatible with today's state-of-the-art refrigerants, including R-12, R-134a and Ternary Blends.

R-134a Pressure/Temperature Chart - SAE

Evaporator: Pressure (PSIG) represents gas temperatures inside the coil and not the coil surfaces. Add to temperature for coil and air-off temperatures (8°–10°F). Conditions will vary for different system configurations. Refer to manufacturers specifications.

Condenser: Temperatures are not ambient temperatures. Add to ambient (35°–40°F) for proper heat transfer, then refer to pressure chart. For example: 90°F ambient temperature + 40°F = 130°F Condenser temperature = 180 PSIG (based on 30 mph air flow)

Preventative Maintenance Schedule

MAINTENANCE INTERVALS

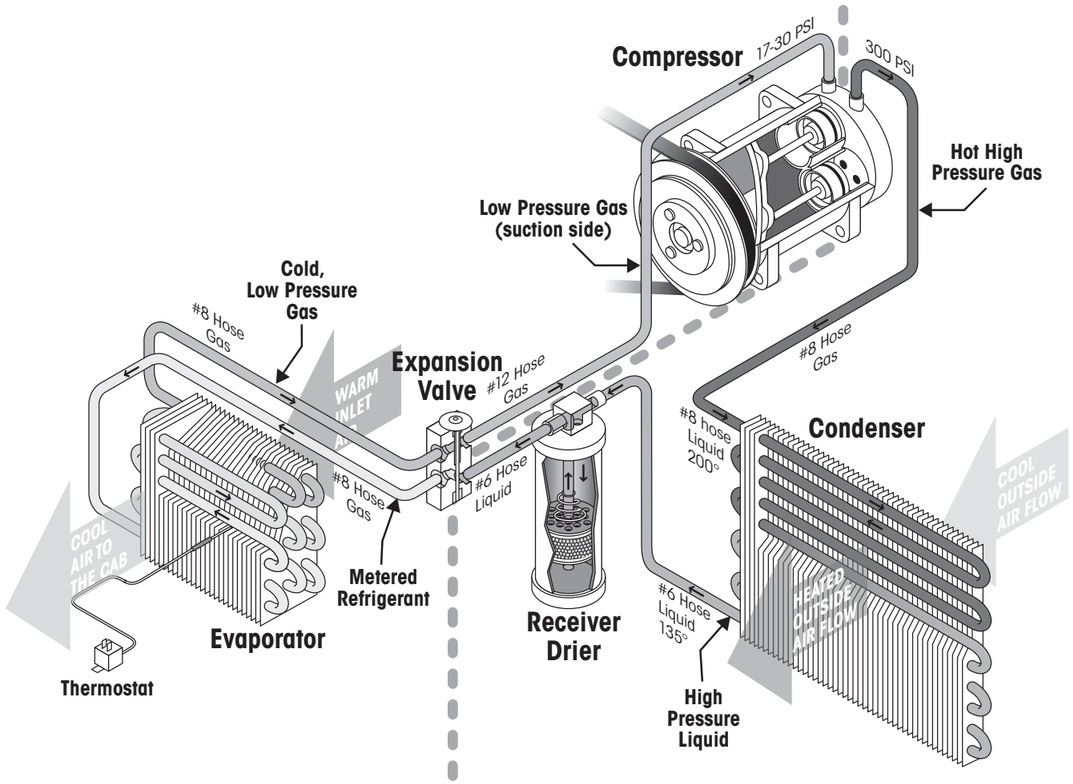
3	=	First 3 months of ownership	15,000 miles	375 hours
6	=	First 6 months of ownership	30,000 miles	750 hours
12	=	12 months	60,000 miles	1500 hours

SPECIAL NOTE:

Use caution when performing preventative system maintenance, ambient conditions (heat load) will increase refrigerant hose temperatures.

	Owner/Operator Maintenance		Technician Maintenance
Maintenance Interval (months)	3	6	12
1. System Maintenance			
❑ Perform visual system inspection	●	●	
❑ Perform manifold gauge check. ❑ Recover and Recycle System refrigerant ❑ Perform system evacuation and leak test ❑ Recharge system with correct refrigerant charge amount			●
2. Compressor and Belt Drive System			
For systems that do not have A/C interlock, (A/C compressor engages when the defrost mod is activated) use the following procedure on a monthly basis. Activate the A/C system for a minimum of 5 minutes every 30 days to circulate the refrigerant system lubrication and verify that the condenser fan(s) (either engine fan for radiator-mounted condensers or electric fans for remote-mounted condensers) engage and/or cycle on and off.			
❑ Check discharge line (warm/hot to touch)	●	●	
❑ Check suction line (cool to touch)	●	●	
❑ Inspect face of clutch hub for signs of slippage (heat discoloration)	●	●	
❑ Check clutch working voltage and current draw (4 amps @ 12 volts / 2 amps @ 24 volts)			●
❑ Inspect shaft seal for presence of oil and dirt indicating leakage	●	●	
❑ Confirm alignment of clutch pulley with crankshaft drive pulley (belt will show side wear)	●	●	
❑ Inspect idler pulley for bearing wear (looseness)	●	●	
❑ Inspect compressor belt for glazing or cracking	●	●	
❑ Check belt tension (verify manufacturer's specs in owners manual)	●	●	
3. Condenser			
❑ Inspect tubes for obvious dents and oil stains/dirt indicating leakage	●	●	
❑ Clean dirt and bugs from condenser fin area (more frequently under severe operating conditions)	●	●	
❑ Inspect condition of fins (straighten as required)	●	●	
4. Receiver Drier (Filter)			
❑ Note: Replace annually or any time refrigerant system is opened			●
❑ Check moisture indicator, either remote mounted or built into the drier (blue is OK while pink or white indicates moisture presence and replacement required)	●	●	
❑ Check temperature of drier canister while running (warm to touch)	●	●	
5. Expansion Valve			
❑ Check inlet (liquid) line from drier (warm to touch)	●	●	
❑ Check refrigerant charge head for damage and leakage			●
6. Evaporator			
❑ Clean dirt, bugs and airborne particulate from fin area	●	●	
❑ Clean dirt, bugs and airborne particulate from the drain pan and drain hole	●	●	
❑ Inspect drain pump (if present) and float for obstructions and operation	●	●	
7. Other Components			
❑ **Thermostat:** Check for proper operation			●
❑ **Filters:** Inspect and clean or replace as needed (dirty filters can cause airflow restriction and premature blower failure)	●	●	
❑ **Pressure Switches:** With manifold gauges installed, check refrigerant pressure switches for proper operation			●
❑ **Water Valve :** Check water valve for proper operation (with control panel temp setting in full cold position, valve should be closed)			●

TYPICAL PLUMBING SCHEMATIC



Air conditioner components are connected together to illustrate system operation. The components shown are not to scale. The refrigerant and refrigerant oil are clear in color and not visible in this drawing; however, we've attempted to suggest temperature variants through the use of values of gray in the pipeline. The small arrows inside the components and connecting hoses show the direction of refrigerant flow (refrigerant circuit).

HOSE SIZES

A/C hose size is determined by the inside diameter of the hose. Hose sizes are also known by the "6, 8, 10, and 12" number designations. The chart below shows hose inside diameters (I.D.) and their corresponding size numbers:

HOSE SIZE	HOSE I.D. (in.)	HOSE I.D. (mm)
#6	5⁄16" (0.312)	8
#8	13⁄32" (0.406)	10
#10	½" (0.500)	13
#12	5⁄8" (0.625)	16

FITTING SIZES

Fitting sizes are identified generally as "6, 8, 10, and 12". These numbers come from 6/16 of an inch, 8/16", 10/16" and 12/16", which generally identify the tube diameter at the point that it passes through the attached threaded nut.

NOTE: Metric threaded connections are not included in this sizing method.
