Six Function LED Rear Combination Lamp

LED Stop/Rear Position/Rear Direction Indicator
Lamp with Retro Reflector and Licence Plate Option

These stylish lamps combine form with function, incorporating stop, rear position, and rear direction indicator lamps with a central reflector, and offer an optional licence plate lamp function. To combine all rear marker and signal functions in a single lamp with a single five core cable allows for a significant reduction in installation time.

This lamp is protected by a lens made of specially formulated high impact acrylic, which is resistant to long-term harsh UV exposure and tolerant to chemicals commonly used in the transport industry. Our team designed this lamp to Hella's Fit and Forget standard, to withstand the most demanding environments.

LED Combination lamp retail packaging

All features of this six function rear combination lamp, including the latest ISO 13207-1 compliance, are designed to ensure lowest cost of ownership for the astute transport operator.

LED Stop/Rear Position/Rear Direction Indicator/Reversing Lamp with Retro Reflector

LED combination lamp with 64cm² red retro reflector. Modern clear lens design with black mounting base.

Features HCS Technology with ISO 13207-1 compliance. Shockproof and fully sealed to withstand water submersion and high-pressure washing. Direction indicator optic appears clear until illuminated.

HELLA LED LAMPS – QUALITY WITH PERFORMANCE

Electromagnetic Compatibility (EMC) is an increasingly relevant safety concern for many emergency, mining and industrial applications. As electronic devices such as LED lamps become more common, so does the risk of unintended electromagnetic interference (EMI) from inferior lamps that can have adverse effects on radios and other communication equipment.

HELLA Lamps marketed as RFCommSafe™ are designed to go well beyond the regulatory requirements as defined in international standards such as EN 55015, CISPR 15, CISPR 25 or relevant UNECE R10 Standards.

RFCommSafe™ products are specified by the New Zealand Fire Service

HELLA LED SAFETY DAYLIGHTS™

BE SAFE BE SEEN

Failure to see another road user in time (or at all) is a contributing factor in over 50% of all daytime accidents. For daytime intersection accidents this increases to as much as 80%.

Source: The Safety Effects of Daytime Running Lights, SWOV, 1997

Why Install HELLA Safety DayLights™?

You might ask yourself "can't I just switch on my headlamps?", since the use of dipped beam headlamps during daylight hours has long been promoted as a Road Safety Initiative around the country.

Dipped beam headlamps are designed to effectively light up the road in front of the vehicle during darkness, whilst causing as little glare as possible to oncoming traffic.

Hence during daytime, dipped beam headlamps 'waste' most of their light directed to the road in front of the vehicle but provide very little as a signal to other road users in bright daylight. Using your Dipped Beam Headlamps during daylight hours has only a marginal added safety effect.

Safety DayLights™ on the other hand are designed to significantly enhance the conspicuity of your vehicle during daylight hours because precision optics direct all the light towards the other road users.

HELLA LED Safety DayLights™

Safety DayLights™ are forward facing signal lamps that significantly enhance the visibility of your vehicle during daylight hours to prevent vehicle crashes by 'accidental oversight'.

As road users we have all experienced the 'fright second' of a near miss by being overlooked by another car, van or truck.

Equally frightening is almost not noticing another vehicle approaching due to an inconspicuous vehicle colour, the low sun casting harsh shadows or sun strike.

Any single one of these 'fright seconds' has the potential to end in a tragic outcome and become a number in the road toll statistics.

Safety DayLights™ are a "never forget" safety enhancement. They automatically switch ON when the ignition is switched ON and automatically switch OFF when the headlamps are turned ON in order not to dazzle other road users at night.

LED Safety DayLights™ Kit - Easy-Fit

Forward Facing Signal Lamps, designed to be mounted on vehicles with flat fronts, or on motorbikes. The lamps are an Easy-Fit installation, usually requiring no extra parts. Once the wiring is complete and the bracket is fitted, the LED lamp easily clips into place and installation is complete.

Safety DayLights™ Smart Controller

This Smart Controller is designed to simplify the installation of HELLA's LED Safety DayLights™ range by eliminating the need to wire the lamp, or changeover relay to ignition terminal 15.

The Safety DayLights™ Smart Controller can be wired directly to the positive terminal of the battery, which saves the difficult and often time consuming task of finding the ignition feed.

The Smart Controller monitors the voltage supply from the battery and will automatically switch the Safety DayLights™ on when the engine is started, and automatically switch them off when the headlamps are activated, or the engine is turned off.

*Advanced version with voltage variation monitor for installation in vehicles with fuel saving alternators.

Dual Function Safety DayLights™ Controller

This Controller is designed to turn your HELLA Safety DayLights™ into front position lamps at night. The dual function controller is connected and activated by the headlamp of the vehicle.

The dual function controller reduces the current to the Safety DayLights™ thus turning them into road legal* front position lamps. Only one controller is required for a pair of HELLA Safety DayLights™.

* Please note legally required spacing of front position lamps and only one pair of front position lamps is legally permitted.

90mm Essential Sealed LED Headlamp Modules - R 80 Series

The Essential Series R 80 headlamp modules provide quality HELLA OE LED lighting technology in a cost effective, robust product. Using an innovative reflector based optical design, the R 80 series produces a well controlled, homogeneous distribution of light that is synonymous with the HELLA brand. With a robust aluminium housing and polycarbonate lens construction, the R 80 series is an ideal upgrade for older halogen headlights offering a long, maintenance-free service life and reduced operating costs. The R 80 is also more compact than many other LED lighting modules with lens-based optics.

90mm Performance Sealed Bi-LED Headlamp Modules - L4565 Series

The L4565 Series Bi-LED module is the third Generation of the Performance series of 90mm LED Headlamp modules and introduces a new Zero Tolerance Integration mounting system.

The lamp is mounted by the front fascia and lamp aiming adjustments occur internally. 'Clearance gaps' required for conventionally mounted modules to achieve module aiming adjustments are no longer needed. the latest electronics and LED developments are also included to produce a headlamp module packed with the very best in OE style lighting technology.

7" Round LED Headlamps - High/Low Beam and Daytime Running Lamp/Front Position

The high/low beam function of the 7" LED headlamp range offers 1150/750 lumen light output and a wide spread creating a superior light distribution increasing peripheral vision. With the added feature of Daytime Running Lamps and Front Position Lamps the 1058LED is a one-stop-shop for all headlamp needs, increasing visibility and therefore safety on the road.

Combining the latest state of the art LED technology, multi-voltage 12/24V DC circuit design and precision optics, the retrofit lamps provide outstanding visibility, safety, and durability – making them one of the most advanced 7" LED headlamps available. The tough die-cast aluminium housing is IP 67 sealed against water and dust ingress with a UV resistant, hard coated polycarbonate lens making the HELLA's 7" Round LED Headlamp range perfect for use on and off-road.

60mm Universal Halogen Headlamp Modules

These headlamp modules were developed for maximum lighting performance with a specified size. In addition, a solution for practice-oriented installation was important. A non-patterned lens is utilised for the high and low beam. An HB3 (output 60 W) is used as a light source for both high and low beam.

The module comprises a glass lens, lens retaining ring (black plastic), spacer ring (black plastic) and a die-cast aluminium reflector with 4 mounting brackets.

Rallye 4000 LED Driving Lamp

The Rallye 4000 LED Driving Lamp combines performance and durability. Available with Pencil Beam or Spread Beam light distribution, the high efficacy from the latest LED technology provides almost 1.3km of clear white (5900K) light from the Pencil Beam version with a low power consumption of just 33W.

LED technology combined with the durable design of the Rallye 4000 LED, which features a high-quality, full metal housing and zinc plated die-cast mounting bracket, allows for long service life, backed by a 3 year warranty.

A replaceable LED-insert with polycarbonate lens is available.

Luminator 3.0 LED Driving Lamp

The revolutionary Luminator LED Driving Lamp now features a distinctive position lamp function made possible by HELLA's innovative Edge Light technology. Utilising the Rallye 4000 metal body, which has proven itself on rally cars and heavy machinery, these lamps are sturdy and reliable. With efficient low power consumption as well as high efficacy from the latest technology allowing up to nearly 600m of light for only 2x15W of power.

A replaceable LED headlamp insert with shock-resistant polycarbonate lens is also available.

RokLUME 380 N LED Driving Lamp 12V DC

The RokLUME 380 N LED Driving Lamp (ECE Ref. 40) is an extremely durable wide spot light for road illumination.

Using LED technology combined with state-of-the-art electronics, it provides a light output of up to **7800 lumens** with a colour temperature of **5000K**, yet power consumption is a highly efficient 84 W.

Originally developed to perform in the toughest operating environments such as mining, the RokLUME 380 N has a premium aluminium housing with NanoSafe coating (providing a non-stick and easy to clean surface), high-impact hard coated polycarbonate lens and heavy duty stainless steel surrounding bracket.

Ultra Beam LED Gen II Driving Lamp 9-33V DC

The popular Ultra Beam LED II series has now been expanded to include a Pencil Beam version. The light output is a powerful **4000 lumens** with a colour temperature of **6500K**. The light is distributed by a specially developed multi-faceted reflector and nylon (PA12) lens, thus ensuring homogeneous illumination. The integrated electronics protect the device in the event of polarity inversion and guarantee constant brightness, even when operating with voltage fluctuations between 9 and 33 Volts DC.

LED Light Bar 350

- Plastic Bracket

The innovative HELLA LED Light Bar 350 is the first such lamp with a lightweight body manufactured entirely from non corrosive, thermally conductive high performance plastics. This aerodynamic powerhouse features 12 durable high performance automotive grade LEDs and a maximum luminous intensity of 145,000 candela with a power consumption of only 25W.

The dust and waterproof Light Bar comes in two different beam patterns – High Beam (Ref 20) and Pencil Beam (Ref 30).

The hermetically sealed and submersible Light Bar features a Multivolt™ circuit for optimum brightness at input voltages from 9V to 33V, is fully road legal with ECE approval and comes with a comprehensive 5 year warranty.

LED Light Bar Protective Covers

Whether you want to protect your Light Bar or make your vehicle look unique, we have the Protective Covers you need for the job.

The amber and black covers give your vehicle a distinctive appearance that's sure to get attention and the amber cover is great during foggy conditions as it reduces glare and reflection.

ILLUMINATION COMPARISONS

Work lamps can be compared by using an informative isolux lighting diagram. These diagrams display the projected light pattern on a surface in the form of isolux lines (lines of equal light intensity). To compare isolux diagrams, various criteria such as installation height, inclination angle and lux scale must be taken into account. An objective comparison is inaccurate if the criteria differ from one another. Comparing diagrams with different colour scales can be easily misinterpreted.

Long Range

Narrow beam range designed to illuminate distant objects between 60m to 200m (depending on lamp installation, installation height and inclination angle).

Isolux Lighting Diagram

Isolux diagrams display the projected light pattern on a surface in the form of isolux lines (lines of equal light intensity).

Close Range

Spread beam designed to illuminate an area near the vehicle, range approx. 20m to 60m (depending on installation height and inclination angle).

Flood

Ultra-wide spread beam designed to illuminate a large area adjacent to the vehicle, typically emitting an extra wide beam (over 45° each side).

ELIVER

The Light Comparison Tool for Work Lamps

The ELIVER tool allows you to easily test and compare our products against each other in a realistic environment. This lets you find the perfect work lights or auxiliary lights for your individual requirements. You can conveniently compare different technologies, such as halogen, Xenon and LED against each other. You can view the light distribution on a farm track, on a street or under off-road conditions.

ELIVER also provides you with all the relevant information about performance and technical specifications. This includes information such as the light range, width and intensity. As a special service, you can call up the respective light range diagram or download brief information about the product as a PDF at any time.

Visit hella.com/eliver and try it yourself.

Module 50 LED Work Lamp

The smallest Work Lamp in the HELLA range. Powerful and ultra-compact, Module 50 LED is the perfect choice for limited space set ups. The **single multichip LED (6500K)** light output is **800 lumens** which is well suited to close-range illumination. A specially developed nylon (PA12) lens system concentrates the light and distributes it to the range of operation. The integrated electronics protect the device in the event of polarity inversion and guarantee constant brightness, even when operating with voltage fluctuations between 9V and 50V DC.

The Module 50 LED Blue Spot Headlamp

The Module 50 LED Blue Spot Headlamp is designed as a warning light to optically warn other vehicles or passers-by of an approaching forklift – increasing occupational safety and helping to prevent accidents.

The special lens optic focuses the **blue LED light beam** to project a circle-shaped warning point on the ground.

Module 70 Gen. IV LED Work Lamp

With **3 x high performance multichip LEDs**, the Module 70 Gen. IV LED Work Lamp is rated to **2500 lumens** while consuming just **30 watts**, with a colour temperature of **6500K**.

Multivolt™ compatible and can therefore be operated with a 12V or 24V DC power supply. Integrated electronics protect the device in the event of polarity inversion and guarantee constant brightness, even when operating when operating voltage fluctuates between 9V and 33V DC. In addition, temperature sensors protect the Work Lamp from overheating.

BL350 LED Work Lamp

The BL350 LED Work Lamp incorporates the latest technology to offer a powerful, durable lighting solution for a multitude of applications.

Featuring energy efficient Multivolt™ technology, this Work Lamp will appeal to applications where energy efficiency and reliability are a must. These lamps offer a formidable net light output of **2200 lumens**.

Designed with Fit and Forget durability in mind, the BL350 LED Work Lamp features a highly impact-resistant lens made of nylon (PA12), a crystal clear polyamide with superior tolerance to chemical and long-term harsh UV exposure, as well as a technologically advanced thermally conductive non-metal housing.

LED Light Bar 470

- Combi Lamp HD Bracket

The LED Light Bar 470 Combi is a unique work lamp offering three light options: close range, long range or combined - all in a single light bar. The lamp is a great addition to any Ute, ATV or off-road vehicle.

Only 1kg of weight means less stress on mounting locations, the low profile design will not restrict cooling airflow when fitted to the front of a vehicle - which can be a problem with larger lights. Don't be fooled by its size though, this light bar certainly punches above its weight with its long distance and spread light output. Multivolt™ circuitry means the lamp can be used with both 12V or 24V DC systems, whilst only consuming 36W. Any input between 9 to 33 volts will give optimum brightness.

The adjustable mounting system ensures for easy installation and flexibility for any orientation. Providing unmatched corrosion resistance due to an innovative thermally conductive polymer housing, and the toughness of a UV, chemical and impact resistant nylon (PA12) lens. The Combi Lamp is the natural choice when exceptional durability and long term reliability in demanding environments is needed.

HELLA EMERGENCY AND SIGNAL WARNING LIGHTING

HELLA's range of Emergency Lighting and Signal Warning Lamps provide high levels of performance and reliability for situations where a powerful warning light is required to attract attention.

LED is the most desired light technology by emergency services due to the many features it offers: ultra-long service life, low power consumption, outstanding light performance, reduced downtime and maintenance requirements.

Quality materials and robust construction are combined to handle demanding and harsh environments. High-quality components, advanced technology and no moving parts offer extremely long design life. LEDs are solid state components and thus demonstrate a considerable higher vibration resistance compared to bulb and motor driven products.

HELLA's rotating and signal warning lamps, offer choices of signal colour, luminous intensities, flash patterns and supply voltages, providing a complete range of warning lamps to suit most applications and performance requirements.

The rotating light pattern is well recognised as a highly effective warning signal in all conditions, even in bright sunlight. Instant activation is ensured from ambient temperatures ranging from -40°C to $+60^{\circ}\text{C}$.

HELLA LED products must meet the highest quality requirements before being approved for the market.

PERFORMANCE AND RELIABILITY ARE GUARANTEED

HELLA Emergency Lamps are tested to International Standards.

Vibration Test

This test simulates the behaviour of the products in harsh off-road conditions and verifies resistance to potholes, washboard road patterns and gravel roads.

A (wide band random vibration) test is used to test the mechanical endurance strength of the test specimen. The vibration frequency range extends from 10 to 1000 Hertz. In addition to vibration testing, products are subjected to a temperature overload of -40°C to +60°C.

Ingress Protection (IP ratings)

HELLA Emergency and Signal Warning Lighting contain precision electronic and mechanical components in order to achieve outstanding product performance. In order to protect these components and assure long term reliability HELLA products are designed and tested to meet international standards on ingress protection as per IEC 60529, DIN 40050-9 or ISO 20653.

Dust Test

Entry of dust can affect the optical and mechanical operation of a lamp, potentially compromising its performance and reliability. Accordingly HELLA products are designed and tested to ensure the risk of dust ingress is minimised or eliminated. Dust-resistant products are rated at IP 5(K) X, while dust-proof products are rated at IP 6(K) X.

Water Splash Test

HELLA products that fulfil the water splash test requirement have been subjected to environmental testing designed to simulate operating conditions representing normal weather conditions. When correctly installed heavy rain, direct splashes and water sprays up to 4 bar will have no adverse effects on the long term reliability and performance of the product. This level of protection is provided on HELLA products rated at IP X4K or above.

Temporary Immersion Test

HELLA products that fulfil the temporary immersion test requirement have been subjected to tests designed to simulate operating conditions that involve brief immersions in water such as off-road driving through a stream. This level of protection is provided on HELLA products rated at IP X7.

High-Pressure Cleaner Test

For the ultimate in water ingress protection, HELLA products that fulfil the high-pressure cleaner test requirement are able to withstand water and steam jets of up to 80°C and 100 bar that may be encountered during commercial and industrial cleaning processes. This level of protection is provided on HELLA products rated at IP X9K.

RotaLED Compact

The HELLA RotaLED Compact is the LED successor to the existing Rotafix halogen beacon series.

These can be replaced 1:1. No moving parts are required for the LED functions – so no wear and maximum reliability.

Since LEDs are maintenance-free, they do not cause any additional costs for spare parts or maintenance. Downtime is reduced to a minimum.

MiniRAY 2.1

MiniRAY 2.1 is a flashing only Beacon with a flat compact design, low current consumption, high efficiency and long service life. Designed for Mining service vehicles, the LEDs are maintenance-free so no additional spare parts are required, to reduce downtime to a minimum.

It is available in fixed mount or magnetic mount making installation extremely flexible (Ø 130 mm and SAE Ø 150 mm).

UltraRAY Beacons are a innovative electronic concept offering a rotating or a flashing LED light function – without moving parts.

The unsurpassed EMI footprint meets the highest possible standard (CISPR25 Class 5). Wherever Beacons risk interference with radio communications, UltraRAY is the solution. UltraRAY can be mounted directly next to radio communication systems and there will be no disturbance from the Beacon.

The shockproof polycarbonate dome guarantees especially reliable protection from impact.

The double lighting system in the UltraRAY 2.0 / 2.1 increases the light exit area, so producing an especially strong warning effect.

DuraRAY 4.0 Brightest HELLA LED Beacon Made for Mining

The integrated light sensor automatically toggles between day and night mode. This guarantees the best possible warning effectiveness.

KL7000 Series

KL7000 high performance revolving Beacon has light values well above the minimum requirements. All KL7000 Beacons can be operated on 12V or 24V by changing the globe. The halogen globe is replaced from the rear of the reflector eliminating the need to touch the highly polished reflector surface. A twin belt drive ensures a smooth and quiet operation.

KL8000 Series

KL8000 revolving Beacon was developed for large and heavy commercial vehicles. High light values guarantee utmost warning effectiveness and safety. Smooth running is achieved due to the maintenance-free drive bearings and twin-belt technology.

Corner Module 270

The HELLA Corner Module 270 is a special wide angle warning lamp which is approved as a "half bar" as a set of two modules and offers a new alternative to conventional beacons. Two modules illuminate an area of at least 270 degrees at a distance of 20m from the vehicle. They can be integrated into the vehicle body or mounted on top using a bracket.

The housing is black and a flashing amber warning lamp creates attention around the vehicle. It is possible to create a double flashing pattern and synchronize the modules. The modules are suggested to be positioned at a 45 degree angle to the driving direction for uniform illumination over full 270 degrees.

GuardRay® Protective Cages

GuardRay® cages are hot-dip galvanised for corrosion protection and fabricated from heavy welded steel wire with bases pre-drilled to accept the standard mounting holes of all our popular Warning Beacons and Bases. Beacons mount inside the universal base, and the wire cage is then clamped to the base. A nylon lanyard stops the cage from falling during servicing.

BST Slim

The BST-Slim is a high-performance warning light which is available with 3 or 6 LEDs.

There are different warning light colours and various flashing sequences which create a synchronous or alternating signal.

The Dual Colour warning light is ECE-R65 type-tested and the rest are SAE approved. It can be used for single, double, triple and quadruple flash as well as with continuous light.

The product with 6 LEDs comes with a "day/night mode" which adjusts the brightness to the ambient light. This provides increased visibility during the day and avoidance of glare at night.

BST Round

The BST-Round warning light is characterised by its new round design which allows flexible installation in different areas of the vehicle. Four power LEDs and high-quality precision optics generate an intensive warning signal with minimum power consumption.

The warning lights are supplied as a set consisting of a controller, two flasher heads and two mounting rings. The power supply cable has an open end and the mounting rings and mounting brackets allow easy and flexible installation. The BST-Round warning light is extremely temperature resistant due to the high-quality aluminium housing and will operate in a temperature range of -40°C to +80°C. The warning lights have different flash patterns, e.g. single flash or double flash. Further details on the different flash sequences can be found in the assembly instructions.

LED LIGHTING TECHNOLOGY - ENERGY EFFICIENT CRISP WHITE LIGHT

HELLA LED based luminaires are sophisticated opto-electronic devices designed to be highly energy efficient and durable, and are a future-proof, low 'Cost-of-Ownership' solution.

“In depth design and engineering know how is required to produce durable products with reliable performance year after year.”

LED based lighting is fast advancing to becoming the logical solution for the cost conscious operator who considers 'Cost-of-Ownership' rather than just the initial purchase price. To design efficient LED luminaires, many factors need to be considered. The LED itself, optics, optic materials, thermal design and drive electronics. These are among the many factors that add up to result in an efficient and durable luminaire.

Lens, Optic Technology and Eye Safety

To take advantage of the ever increasing efficacy of the most advanced LEDs, efficient optic design is essential to capture as much of the luminous flux emitted by the LED as possible. An evenly illuminated surface area is evidence of competent optic design. With significant advances in LED brightness, eye safety considerations are increasingly important.

For interior lights it is essential for high power LEDs to be coupled with optic designs that protect the eye's retina. It is desirable for a large portion of the lens area of a luminaire to be evenly illuminated via an efficient optic rather than using a bundle of LEDs without any optic. Easily visible LEDs inside a luminaire without any optic or lens protection can cause a degree or even significant eye discomfort if viewed directly.

A recent US Department of Energy (DOE) report warns of poorly designed LED luminaires, associating low frequency 'Flicker' with the possibility to trigger epileptic attacks in parts of the population that are susceptible.

Well designed LED lighting systems do carry a higher initial price compared to many other lamps now on offer. For most applications, higher efficiency and long term reliability of a competently designed and manufactured LED luminaire is a convincing Value Proposition.

Heat and Thermal Management

Competent and well engineered thermal management is essential for the long-term durability of HELLA LED luminaires. A common misconception is that LEDs do not generate heat. LEDs consume power and some of this power is also converted to heat, even in the most energy efficient LEDs.

In contrast to incandescent lamps however, LEDs do not like to 'run hot'. As a rule of thumb the hotter an LED runs, the faster it will degrade and in extreme cases result in a much lower light performance and shorter service life.

A noticeably 'hot to touch' exterior surface of a high power LED interior lamp provides some indication that the light output of the device will deteriorate fast, sometimes within a few hundred hours. Well engineered LED devices will operate 'cool' or 'warm' to the touch after many hours of operation. HELLA has many years of technical expertise in developing good thermal designs, when matched with superior optics and electronic design it ensures the long term durability of all our LED lighting products with minimal degradation over many years of service.

Highly efficient white LED luminaires are becoming a solution that make ecological and economic sense for an ever increasing range of applications.

Reliability

Due to the solid state nature of LEDs there are no filaments to break, however LEDs do require precise current control, overvoltage and spike protection to avoid any premature damage.

For LED luminaire designers and manufacturers, in depth design and engineering know how is required to produce durable products with reliable performance year after year.

Considerations such as hermetically sealed housings, sealed cable entries, effective electronic protection, shock, vibration and impact resistant components all contribute towards long term reliability. Compared to incandescent lighting, where a filament inside a globe may break at any moment, HELLA LED lighting is designed as a reliable Fit and Forget solution.

Colour Temperature and Rendering

LED based lighting has had a reputation for appearing 'cold' and 'blue' due to their phosphorous coating technology.

However today's high efficacy devices can rival traditional incandescent light sources for colour and ambience. When selecting LED interior lighting, colour temperature is an important consideration.

1850 K	Candle
2800 K	Halogen Globe (Incandescent Lamp)
2500-3200 K	Warm White LED
4600K-5600 K	Crisp White LED
6500 K	Daylight

Colour temperature is measured in Kelvin (K) and describes the effect of heating an object until it glows incandescently. The emitted radiation, and apparent colour changes in proportion to the temperature; envisioned when considering hot metal in a forge that glows red, then orange, and then white as the temperature increases.

HELLA describes higher colour temperatures (4600 K to 5600 K) as 'crisp white' and lower colour temperatures as 'warm white'.

'Neutral white' is considered around 4200 K range. Crisp white is recommended for visual tasks, work areas and exterior lighting.

Warm white is suggested for interior spaces as it adds life and vibrancy to people and objects. It is considered more flattering to skin tones or fabrics and makes food look fresh and attractive.

NEW DIMMABLE LOGOS WHAT DO THEY MEAN?

Logos used throughout the Interior/Exterior section to help quick referencing of important product features are explained below.

Light intensity is reduced as the DC input voltage is reduced below the lamps specified operating voltage.

Light intensity is controlled through the lamp's own internal circuitry via in-built buttons, an external DC power source and a standard switch. See specific lamp instructions for further information.

Light intensity is adjusted between 10-100% using a high frequency PWM (pulse width modulation) DC power supply, with adjustable duty cycle control.

Light intensity can be switched between 100% and a lower level factory pre-set value, usually via an additional cable input supplied with the lamp using a positive feed from the DC power supply within the lamps operating voltage range.

EuroLED®

Advanced LED Lamps with touch sensitive switching.
Power saving and ultra durable.

Lighting control is beautifully simple. Touch the colour pad for red light and the white pad for white light. On the dual colour versions, hold your finger on the pad for more than two seconds and the lamp will cycle through four dimming levels. Release your finger on the light level required.

Dual colour EuroLED® Touch lamps can also be remotely operated from multiple points with 'off the shelf' ON/OFF/ON momentary switches. Holding one of the external switches for two seconds will synchronise the lamps to the same dimming level.

Light levels are 'remembered' by the lamps circuitry, even when a vehicle's batteries are turned off.

Designed and manufactured in New Zealand, EuroLED® Touch lamps provide red/white, or white only light using the latest completely sealed touch sensitive technology.

The lamp will always turn on at the colour intensity previously set, regardless of power interruption.

EuroLED® Touch power consumption is 4W on white (0.33A @ 12V) and less than 1.5W on red (less than 0.125A @ 12V) to provide significant power savings.

The durability of EuroLED® Touch Lamps is outstanding. Each lamp is completely waterproof, impact and shock resistant, for an ultra long service life. Multivolt circuitry provides optimum brightness across a range of input voltages from 9-33V DC, even under severe voltage fluctuations.

ILLUMINATION CHARTS

EuroLED® 150 - White

EuroLED® 150 - Warm White

Illumination Charts Explained

Our light performance charts show luminance and spread in an easy to read format. At the top is the spread, with the boundary threshold being defined as half the peak luminance. While there is light beyond the indicated angles, the majority of light will be inside the cone shown.

The difference between lux (illuminance) and lumen (luminous flux) is that lux takes into account the area over which the luminous flux is spread. Accordingly the lux figure decreases with distance. Most interior lamps will be installed at around the 2-2.5 metre height.

As a guideline, some 40-100 lux is required for corridors and passageways, around 300 lux for reading and 500-800 lux for offices.

The spread pattern may not be designed symmetrical so the spread horizontally (H) and vertically (V) are given.

Luminance is additive, meaning overlapping light patterns or multiple lamps lighting the same surface add their luminance.

HELLA RELAYS

HELLA offers a comprehensive range of relays to suit 12 and 24 volt applications. Quality accessories facilitate the expansion into new applications and provide customers with new solutions.

COMMON PIN DESIGNATIONS FOR RELAYS

Pin No.	Description	Eliminating Voltage Spikes Voltage spikes from 300V to 500V can occur momentarily when a relay is switched off. Sensitive electronic equipment can be damaged or malfunctions can occur if these spikes reach the vehicle electrical network without suppression. A relay with a diode eliminates voltage spikes completely.
85/2	Earth (end of winding to ground or negative)	
86/1	Positive	
87/5	Output (to consumer e.g. driving lamp)	
87a/4	Alternative output (1st output, break side)	
30/3	Positive supply (Input from + battery terminal, direct)	

The Different Types of Relays

The Normally Open Relay	The Normally Open Relay with Dual Output	The Change-over Relay
		
A normally open relay is used to close the electric circuit between power source and electrical load, i.e. the load is switched on. Relays are operated by means of switches, pulse generators or control devices. Application: Headlamps, auxiliary driving lamps, auxiliary fog lamps, horns, heaters, motors for fans and power windows, air-conditioners and ignition assemblies.		The change-over relay changes the load path from one electrical load to another. The relay is operated by a dashboard switch. Application: Switching over from town horn to fanfare horn, for 2 speed appliances such as heated rear window or fan motors. Change-over relays can be used as: • Change-over relays • Normally open relays • Normally closed relays

Relays have been predicted to be obsolete in modern vehicles, however the automotive industry needs relays since relay functions cannot always be replaced by control units. Only relays make "galvanic isolation" possible between input and output. Semi-conductor devices cannot manage this at the moment. Another positive factor is the cost advantage relays have compared with an electronic solution.

In motor vehicles, relays are used to switch high currents. For example, the engine control unit is switched by a relay. Their sturdiness allows them to be installed near electric consumers. As only low control currents are required, the cable cross-sections can be kept small. The switching/amplifier function of a relay can only be achieved with a lot more effort and a lot less reliability using "modern" electronics. An additional advantage is that the replacement of a relay is quick and easy. These characteristics guarantee that relays will have a regular place in many vehicles for a long time to come.

Trust in our Quality Relays

- Production expertise: HELLA produces more than 100 million relays per year. Thanks to optimised production we can offer a competitive price for customers. HELLA relays have an extremely low failure rate.
- OEM customers: HELLA develops and produces relays for AGCO, Claas, Daimler AG, Ford, VW, GM, JCB, Opel, Nissan, John Deere, Chrysler and Jaguar/Land Rover among others. We have been working with many customers for decades.

Voltage Sensitive Relay Module

Digital Voltage Sensitive Relay with dual sensing for 12 and 24 volt systems. Suitable for boats, caravans and 4WD vehicles, this relay allows a separate battery to be used independently from another battery permitting, for example, the starting battery not to be discharged. However when either battery is charged, the relay will connect both batteries to allow dual charging. Very low power consumption (less than 2mA) or none in power storage mode.

The Voltage Sensitive Relay installation must be protected by a suitably rated fuse.

SAFETY DayLights™ SMART CONTROLLER

The smart controller is designed to simplify the installation of HELLA's LED Safety DayLights™ (SDL) range by eliminating the need to wire the lamp, or changeover relay to ignition terminal 15.

The Safety DayLights™ Smart Controller can be wired directly to the positive terminal of the battery, which saves the difficult and often time consuming task of finding the ignition feed.

The smart controller monitors the voltage supply from the battery and will automatically switch the Safety DayLights™ on when the engine is started, and automatically switch them off when the headlamps are activated, or the engine is turned off.

Advanced and standard versions available.

Dual Function Safety DayLights™ Controllers

This Controller is designed to turn your HELLA Safety DayLights™ into front position lamps at night. The dual function controller is connected and activated by the headlamp of the vehicle.

The Dual Function Controller reduces the current to the Safety DayLights™ thus turning them into road legal* front position lamps. Only one controller is required for a pair of HELLA Safety DayLights™.

* Please note legally required spacing of front position lamps and only one pair of front position lamps is legally permitted.

HELLA COMPATIBILITY SOLUTION

HELLA HCS lamps, electronic control and flasher units are designed to the latest ISO International Standard to provide compatibility with commercial vehicle indicator failure systems.

Vehicles driven on public roads require the operation of direction indicator lamps to be monitored and a fault instantly signalled to the driver. Direction indicator lamps are an important road safety feature, signalling the direction change of the vehicle. Failure to signal or failure to recognise a direction indicator signal poses a significant risk of causing an accident.

LED direction indicator lamps offer a reliable Fit and Forget solution and have become the choice for cost conscious transport operators. LED lamps with their low power consumption and Multivolt features, are often a challenge for existing lamp failure detection systems on modern trucks and buses.

Transport fleets often feature a mix of trailers equipped with globe based lamps as well as trailers with full LED based lighting solutions. For the efficient operation of the fleet, each of these trailers should be compatible with the indicator failure detection systems of any of the trucks in the fleet, both now and in the future.

Some manufacturers recommend fitting additional resistive loads in parallel to the LED lamps, to simulate the 21 watts consumed by a traditional globe lamp.

Such pure resistive load solutions can be problematic for the following reasons:

- They mask the possible failure of the actual LED signal lamp itself.
- In many cases such pure resistive solutions do not function as they provide a linear time/current response which is significantly different to the time/current response of a globe filament when it heats up, as in the initial heat-up period the globes consume significantly more power than the rated 21 Watt.
- Additional parallel resistors consume a significant amount of energy and thus negate the lower power advantage that LED lamps offer.
- LED lamps marked with the HCS symbol feature patented indicator failure control technology which allows seamless communication with HELLA HCS control flasher units, or modern European trucks with body controllers compliant with the ISO 13207-1 standard.

International Organisation for Standardisation

The International Organisation for Standardisation (ISO) is a network of national standards bodies working together to develop International Standards. Currently ISO has members from 162 countries and 3,368 technical bodies working to a common goal of making international trade and industry more effective and efficient. The standards operate by global consensus, with many governments adopting the standards into their legislation.

“HELLA Australia has been instrumental in the development of the HELLA Compatibility System (HCS)”

ISO 13207-1 Standard

ISO 13207-1 specifies a precisely timed pulse for a low power LED lamp, which momentarily mimics the power consumption of a conventional incandescent globe. This pulse is suppressed when the LED direction indicator diagnoses itself as faulty. An ISO 13207-1 compatible flasher or vehicle body controller interprets the pulse suppression and alerts the driver to a faulty lamp or faulty wiring.

Body Control Modules or HCS flasher units together with LED lamps designed to ISO 13207-1 maintain the benefit of low power LED lamps, as opposed to a parallel resistor which increases the power consumption to that of a 21 watt globe.

HELLA Australia has been instrumental in laying the groundwork for the development of the HELLA Compatibility System (HCS), which became the blueprint for the ISO 13207-1 standard. HELLA HCS lamps are fully compliant with ISO 13207-1.

ISO 13207-1 has been agreed to by European truck manufacturers and will be incorporated into the vehicle monitoring electronics of European trucks.

Astute transport fleet operators are already future-proofing their trailers by specifying HELLA HCS Fit and Forget LED lighting solutions which will be plug-and-play with 24 volt European trucks.

HELLA lamps which incorporate HCS readily comply with ISO 13207-1.

The HCS innovation generates a pulse that simulates the current draw equivalent to an incandescent globe.

LED Compatible Flasher Unit specifically designed for use with HCS (HELLA Compatibility Solution) LED indicator lamps. Provides stable flash rate and reliable globe/LED lamp failure indication, for towing vehicles and trailers. Suitable to operate combinations of HCS LED and conventional 21W globe-type lamps.

3038	4DW 009 492-012	24 VOLT DC
Maximum Load	3+1 (8) x HCS or 21W	
Frequency	90 +/- 30 flash signals per minute for direction indication and hazard warning.	
Protection	IP 53 (Protection against dust and water spray)	
See page 276-277 for further information on HCS Technology		

HCS Electronic Flasher Unit 3+1

LED Compatible Flasher Unit specifically designed for use with HCS (HELLA Compatibility Solution) LED indicator lamps. Provides stable flash rate and reliable globe/LED lamp failure indication, for towing vehicles and trailers. Suitable to operate combinations of HCS LED and conventional 21W globe-type lamps.

HCS Basic Control Unit (12V and 24V)

HCS LED indicator outage monitoring unit with 21W bulb current simulation. For vehicles without flasher units that carry out current measurement for the failure check. In combination with trucks/trailers fitted with HELLA HCS LED indicator lamps, the control unit simulates the time/current response of an incandescent bulb. Two variants suitable for vehicles operating with 12V or 24V.

5DS 227 488-001
12 VOLT DC
5DS 227 488-101
24 VOLT DC

Operating Voltage 12V DC / 24V DC

Connection DT Type 6-Pin Socket (Indicator Circuit Input/Output)

Note Control unit is responsible only for monitoring the direction indicators.

See page 276-277 for further information on HCS Technology

HCS Premium Control Unit (12V, 12V and 24V)

Similar to the basic version, but with additional features for the whole rear lighting: tail lights, stop lights, direction indicators, reversing lights, and rear fog light. Suitable for vehicles operating with 12V or 24V systems and 1 stop light channel or 12V systems and 2 stop light channels.

5DS 227 489-001 – 1 Stop Light Channel
12 VOLT DC
5DS 227 489-011 – 2 Stop Light Channels
12 VOLT DC
5DS 227 489-101 – 1 Stop Light Channel
24 VOLT DC

Operating Voltage 12V DC / 24V DC

 Connection DT Type 6-Pin Socket (Indicator Circuit Input/Output)
DT Type 8-Pin Socket, 'A-Coded' (Other Functions Input)
DT Type 8-Pin Socket, 'B-Coded' (Other Functions Output)

Note Control unit is responsible for monitoring the whole rear lighting (tail lights, brake lights, direction indicators, reversing light and rear fog light).

See page 276-277 for further information on HCS Technology

HELLA Universal Rocker Switches

HELLA universal flush-fit rocker switches are readily adaptable to 12V and 24V applications. This large and varied range covers nearly all switching types and connections. A wide selection of symbols ensures proper labelling of all main switching and monitoring functions. The switching and control displays can be illuminated.

Mounting	Mounted directly to properly dimensioned opening (1 - 2.5mm thick) or by mounting panels (for more information see page 344).
Maximum Load	16A @ 12V, 8A @ 24V.

Connectors, symbols, mounts and globe holders are to be purchased separately.

Location lamp illuminates lamp with park lights. Pilot lamp illuminates when switch is in the 'on' position.

Technical drawing of the SW 24 valve assembly. The side view shows a rectangular body with a total width of 58.75 mm. The mounting flange has a width of 16.55 ± 0.5 mm and a central hole diameter of 13.05 ± 0.2 mm. The body height is 27.56 mm, and the mounting flange thickness is 1.5 mm. The front view shows a circular flange with a diameter of 24 mm and a central hole diameter of 13 mm. The drawing is labeled with dimensions and a note: "M12x1.5" and "SW 24".

Timing diagram for the P1 channel of the P1/P2 module. The diagram shows three signal pulses: S_1 (Signal), T_1 (Temperature), and T_2 (Pressure). The total duration of the P1 channel is $T_{P1,nom} = 9216 \mu s$. The first pulse S_1 has a duration of $T_{P1,nom} = 1024 \mu s$ and a width of $S_1 = 256 \dots 640 \mu s$. The second pulse T_1 has a duration of $T_{P1,nom} = 4096 \mu s$ and a width of $T_1 = 128 \dots 3968 \mu s$. The third pulse T_2 has a duration of $T_{P2,nom} = 4096 \mu s$ and a width of $T_2 = 128 \dots 3968 \mu s$. The diagram also shows the timing of the P1 channel relative to the P2 channel, with $T_{P1,rel} = 0 \mu s$, $T_{P1,nom} = 0 \mu s$, and $T_{P2,nom} = 0 \mu s$.

TOWING, TRAILER AND TRUCK WIRING CONFIGURATIONS

Common trailer lighting pin configurations used for different plugs and sockets are tabled and illustrated below.

5 Pole Round Light Duty Connector (AS2513)

5 POLE ROUND LIGHT DUTY CONNECTOR (AS2513)		
Terminal No.	Function	Colour
2	Left-hand flasher lamps	Yellow
3	Earth return	White
5	Right-hand flasher lamps	Green
6	Stop lamps	Red
7	Rear position, number plate and clearance lamps	Brown

Note If separate earth cable is not used on vehicle, earthing strip supplied should be fitted into Terminal No. 3 of socket and under mounting screw as shown.

7 Pole Round Light Duty Connector (AS2513)

7 POLE ROUND LIGHT DUTY CONNECTOR (AS2513)		
Terminal No.	Function	Colour
1	Left-hand flasher lamps	Yellow
2	Reversing lamps	Black
3	Earth return	White
4	Right-hand flasher lamps	Green
5	Service brakes (or Auxiliary)	Blue
6	Stop lamps	Red
7	Rear position, number plate and clearance lamps	Brown

Note Where service brakes are not fitted, Terminal No. 5 is commonly used for auxiliary trailer power.

7 Pole Round Light Duty Connector (ISO1724)

7 POLE ROUND LIGHT DUTY CONNECTOR (ISO1724)		
Terminal No.	Function	Colour
1	Left-hand flasher lamps	Yellow
2	Rear fog lamp	Blue
3	Earth return	White
4	Right-hand flasher lamps	Green
5	Right tail lamp, clearance lamp, sidelamp and number plate lamp	Brown
6	Stop lamps	Red
7	Left tail lamp, clearance lamp, sidelamp and number plate lamp	Black

Note Common hardware to AS2513 7 Pole Round connector, but accounts for separate right/left tail lamps and rear fog lamps. Also does not account for reversing lamps on the trailer.

7 Pole Flat Light Duty Connector (AS2513)

7 POLE FLAT LIGHT DUTY CONNECTOR (AS2513)		
Terminal No.	Function	Colour
1	Left-hand flasher lamps	Yellow
2	Reversing lamps	Black
3	Earth return	White
4	Right-hand flasher lamps	Green
5	Service brakes (or Auxiliary)	Blue
6	Stop lamps	Red
7	Rear position, number plate and clearance lamps	Brown

7 POLE ROUND HEAVY DUTY CONNECTOR (ISO1185)		
Terminal No.	Function	Colour
1	Earth return	White
2	Left tail lamp, clearance lamp, sidelamp and number plate lamp	Black
3	Left-hand flasher lamps	Yellow
4	Stop lamps	Red
5	Right-hand flasher lamps	Green
6	Right tail lamp, clearance lamp, sidelamp and number plate lamp	Brown
7	Control trailer brake	Blue

7 Pole Round Heavy Duty Connector (ISO1185)

7 POLE ROUND HEAVY DUTY CONNECTOR (SAE J560)		
Terminal No.	Function	Colour
1	Earth return	White
2	Clearance lamps/outline marker lamps, identification lamps	Black
3	Left-hand flasher lamps	Yellow
4	Stop lamps	Red
5	Right-hand flasher lamps	Green
6	Tail lamps and number plate lamps	Brown
7	Brake controller (or Auxiliary) Power	Blue

7 Pole Round Heavy Duty Connector (SAE J560)

7 POLE ROUND HEAVY DUTY CONNECTOR (AS4735)		
Terminal No.	Function	Colour
1	Earth return	White
2	Left tail lamp, clearance/outline lamp, identification and number plate lamp	Black
3	Left-hand flasher lamps	Yellow
4	Stop lamps	Red
5	Right-hand flasher lamps	Green
6	Right tail lamp, clearance/outline lamp, identification and number plate lamp	Brown
7	Reversing lamps	Blue

7 Pole Round Heavy Duty Connector (AS4735)

7 POLE ABS/EBS CONNECTOR (ISO 7638-1 / ISO 7638-2)		
Terminal No.	Function	Colour
1	(+) 12V or 24V permanent for control valves	Red
2	(+) 12V or 24V via ignition lock for electronics	Black
3	Ground for electronics (Pin 2)	Yellow
4	Ground for control valves (Pin 1)	Brown
5	ABS Fault Indication	White
6	CAN H, for EBS and ABS	Green/White
7	CAN L, for EBS and ABS	Brown/White

7 Pole ABS/EBS Connector (ISO 7638-1 / ISO 7638-2)

Multivolt™ suzi coil comes with warning flags

This connector is intended to be used for ABS and EBS on heavy duty trailers. 12V ISO 7638-2 connector is identified with a key between pin 3 and 4, while 24V ISO 7638-1 connector is identified with a key at pin 5. Multivolt™ Connector: Only to be used on Multivolt™ ABS/EBS systems. It is the responsibility of the user to ensure correct voltage compatibility and latch alignment. System created for 12V and 24V. We assume no liability for damage resulting from improper application.

7 Pole Heavy Duty SAE Plug - Metal

Heavy-duty 7 Pole Metal Plug manufactured in accordance with AS 4735-2003 (ISO1185 & SAE J560B) standards. Features die-cast zinc housing, high-conductivity 100 percent brass floating pins held between sonic-welded inserts and spring cable guard for additional support and protection. Larger finger grips set back from the latched socket lid allow for safe and trouble-free disconnection.

4934	8JA 905 392-001	PLUG
Maximum Load	70A @ 12V	
Suits	Part No. 4907, 4935 and 4935NY

7 Pole SAE Socket - Metal

Heavy-duty 7 Pole Metal Socket die-cast in robust zinc and manufactured in accordance with AS 4375-2003 (ISO1185 & SAE J560B) standards. Features include full opening lid for ease of plug insertion and extended front barrel housing for added plug support. Raised internal ribs allow for drainage of moisture to prevent corrosion and short circuits. Includes protective rubber boot, Part No. 4936.

4935	8JB 905 392-021	SOCKET
Mounting	58.9mm diameter opening

7 Pole SAE Plug - Nylon

4934NY	8JA 905 392-011	PLUG
Maximum Load	70A @ 12V	
Suits	Part No. 4907, 4935 and 4935NY	
Wiring Standards	ISO 1185, SAE J560, AS4735	

Heavy-duty 7 Pole Plug manufactured in accordance with AS 4735-2003 (ISO1185 and SAE J560B) standards. The ultra-durable nylon housing is of lightweight and resistant to degreasers, solvents and contact cleaners. Other features include high-conductivity 100 percent brass pins, exclusive cable guard and 360 degree compression clamp creating a rear moisture seal, whilst also preventing accidental cable pull out.

7 Pole SAE Socket - Nylon

4935NY	8JB 905 392-031	SOCKET
Mounting	58.9mm diameter opening	
Maximum Load	70A @ 12V	
Suits	Part No. 4934NY and 4934	
Spare Part	4936 Protective Rubber Boot ①	
Wiring Standards	ISO 1185, SAE J560, AS4735	

Heavy-duty 7 Pole Socket made from composite glass-filled nylon and manufactured in accordance with AS 4735-2003 (ISO1185 & SAE J560B) standards. The ultra-durable nylon housing is of lightweight and resistant to petrochemicals, solvents and contact cleaners. Raised internal ribs allow for drainage of moisture to prevent corrosion and short circuits. Other features include full opening lid and extended front barrel housing for additional support and protection. Supplied complete with protective rubber boot, Part No. 4936.

Suzi Coil with Heavy Duty 7P SAEJ 560 Plugs

These 7 pin spiral cable-plug assemblies are designed to provide a superior electrical connection between the Prime mover and trailer. The uni-molded connector bodies are extremely robust providing best in class performance and are completely unique to the market.

- High performance crimped contacts
- Integrated strain relief provides permanent kink protection
- Resistant to diesel fuel, engine coolant, engine oil, gear oil, water, salt, dirt, UV radiant and impact resistance.

Superseal Connectors

Superseal connector housings were developed to satisfy increasing requirements for safety and reliability in the field of electrical connections. The connectors can be connected to existing components and used with the equipment presently in use in the automotive industry (sensors, oil pressure sensors, water temperature monitoring circuits, etc.).

- IP 67 (Protection against dust and temporary water immersion)
- Robust and reliable contact. Max. current 14A.
- Prefabricated secondary lock ensures that the terminal is plugged into the housing correctly and prevents slipping out of the connector.

For 'P' and 'S' versions only the bare connector is supplied. Select appropriate seals and terminals to suit.

Voltage	9-15V DC
Current Draw (Idling)	0.35 A
Current Draw (Maximum/Stalled)	10.5A (Sprung Return Models)
Actuating Force	100N (35°C Ambient Temperature)
Functional Stroke	18mm
IP Rating	IP 5K4
Operating Temperature	-40°C to 60°C
Weight	90g

6NW 009 203-441 – Medium Force Actuator, 24V, No Spring Return

6NW 009 203-521 – Medium Force Actuator, 24V, Spring Return

Voltage	18-30V DC
Current Draw (Idling)	0.2-0.6 A (idling)
Current Draw (Maximum/Stalled)	4.2A (Non-Spring Return Models),
Nominal Actuating Force	100N (35°C Ambient Temperature)
Functional Stroke	18mm
IP Rating	IP 5K4
Operating temperature	-40°C to 60°C
Weight	90g

UP5.0 Electric Vacuum Pump

Suitable for electric, hybrid and off-road vehicles that do not have a strong constant vacuum source to maintain operation of the brake booster in the vehicle and require a standalone pump to generate vacuum pressure to drive accessory systems or vacuum brake boosters.

Temperature Range	-40°C to + 85°C	
Protection	IP 66 (Protection against dust and high pressure washing)	

Heavy Duty Multivolt™ Reversing Alarm, 87 - 112dB Automatic

Heavy Duty Reversing Alarm automatically adjusts sound pressure level to changing noise environments. Solid-state electronics self-adjust to a minimum of 5dB above surrounding noise levels effectively reducing irritation and hearing impairment. Robust steel housing and mounting plate protected with powder-coat paint for maximum durability.

6018	3SL 996 139-002	87 - 112dB
Mounting	Integrated universal mounting bracket for upright, pendant or surface mounting	
Voltage	Multivolt™ (12-24V DC)	
Current Draw	0.4A	
Frequency	960-1440Hz	
Sound Pressure Level	87 to 112dB(A) @ 1.2m	
Temperature Range	-40°C to + 85°C	
Protection	IP 66 (Protection against dust and high pressure washing)	

Warning Buzzer

Piercing continuous sound. Suitable for a variety of applications e.g. headlamp, oil, handbrake, indicator, temperature, door close/open, brake fluid, etc.

Mounting	Adjacent to the gear shift lever or linkage		
Protection	IP 55 (Protection against dust and water jets)		
Suits	6043 - 6049 and 6008 - 6015		

Evacuator Plus Heavy Duty Reversing Alarm

The Evacuator Plus Heavy Duty Reversing and Warning Alarm features a lightweight piezoelectric output circuit.

The reduced weight of just 129 grams makes the Evacuator Plus virtually immune to vibration damage. Unique nickel plated conductive terminal inserts, which provide power to the alarm, are hermetically sealed, giving superior water resistant performance.

The housing is constructed of high impact ABS plastic resin and is environmentally sealed against moisture, dust and corrosion. Evacuator Plus reversing and warning alarms are steam cleanable.

6043	3SL 905 415-001	97dB
6044	3SL 905 415-011	112dB
Mounting	Universal mounting comes complete with heavy-gauge plated steel mounting bracket. Can be installed on positive and negative ground vehicles.	
Voltage	6043/6044 - 12-48V DC	
Current Draw	Less than 0.10A	
Frequency	80 signals per minute +/- 20%	
Sound Pressure Level	Part No. 6043 97dB(A) @ 1.2m Part No. 6044 112dB(A) @ 1.2m	
Temperature	Operating range -40°C to 74°C	
Protection	IP 55 (Protection against dust and water jets)	
Compliance	SAE J994	

Reversing Alarm

Reactor heavy duty Reversing and Warning Alarm automatically adjusts to changing noise environments. State-of-the-art, solid-state electronics self-adjust to a minimum of 5dB above surrounding noise levels, thus reducing irritation, complaints and hearing impairment.

Reactor alarms feature integral universal mounting brackets and high impact ABS plastic resin housing and are totally environmentally sealed in epoxy to guard against moisture, dirt and vibration.

TURBO FAN

Turbo Fan

Turbo Fans provide high capacity at low power consumption. Features include impact resistant housing, low-noise operation and soft plastic impellers, shielded by sturdy protective grille for added safety. Fans can be turned in all directions, and locked in position. Airflow can be regulated by two-stage switch.

LED Lamp Distribution Box

HELLA's revolutionary LED Lamp Distribution Box is the quick connect, easy trouble shooting solution for fitting LED lamps to heavy trailers and custom vehicles. The LED Lamp Distribution Box is designed with integrated DT type connector sockets that provide easy and reliable lamp connection. Internal electronics protect and isolate individual circuits and reduce lamp outage to ensure a long life and reliable lamp operation. A completely sealed housing and durable materials provide protection against water, dust and high pressure/ steam jet cleaning.

LED Hand Held Spot Lamps

The new LED hand held spot lamp only uses 1/3 of the power consumption of the 1520. It has a compact size and light weight, and is comfortable to hold even for long periods. The LED spot lamp comes with a spiral plug-in cable (which can stretch up to 3.5m) and a DT connector, which allows a custom cable to be fitted to suit your own requirements.

Timing Light/Analyser

Timing Light/Analyser for all 4, 5, 6 and 8-cylinder engines with stroboscope, dwell-angle meter, rev-counter and voltmeter with voltage tester (0-16V). Enables adjustment timing whilst simultaneously measuring the engine speed. Features corrosion and impact resistant housing and inductive clamp. Suitable for 12V DC electrical systems with standard or transistorised ignition.

Timing Light

Timing Light with stroboscope for precise timing adjustment of all petrol engines. Features corrosion and impact resistant housing and inductive clamp.

Compression Tester

For spark-plug holes of either 14 or 18mm diameter. Diagnosing different cylinder compression values early enough prevents possible later engine damage.

Battery Acid Tester

Handy and robust instrument for professional measurement of the battery charge and acid density in lead batteries. A new suction system design prevents bubbles from forming and keeps the liquid to be tested from flowing back. The precision measuring unit can be rotated 360° allowing measurement regardless of the position of the unit.

XENON WHITE ULTRA-BLUE – WHITER (UP TO 4200°K)

These globes come close to emulating the colour of a Xenon HID lamp. The high colour temperature of the Cool Blue globes creates the crisp white light which provides illumination that is conspicuous while being easy on the eye

PLUS100 LONGLIFE - UP TO 2.5 TIMES THE LIFETIME AND 100% GREATER ILLUMINATION.

A new generation of high performance Halogen Globes specifically designed to cope with the extreme demands of 24-volt heavy-duty commercial transport applications. The advanced single-coil filament technology is highly vibration resistant and up to 100% brighter than normal, typically extending useful illumination of the road by 20 metres and delivering double the service life of standard globes.

LONGLIFE (LL) - UP TO TWICE THE LIFE

LongLife (LL) globes are increasing in popularity for applications such as taxis and drivers using headlamps during the day. Many new vehicles now come equipped with LongLife globes as a standard fitment. The globes will provide safe and legal light performance and can be rated at twice or greater the service life of standard globes.

3RD EDITION ADR REFERENCE GUIDE

The following pages are a guide to mounting HELLA lamps in compliance with the Australian Design Rules (ADR). The diagrams in this section are intended as a general guide only, for exact mounting specifications please refer to ADR 13/00.

A quick reference

1. Find the product that fulfils your illumination requirement.

2. Check for the ADR symbol next to the part number to ensure it's compliance.

HELLA Part No.	Operating Voltage (V)	A.S.B. No.	Function
2580	20/25/30/35	44-002	Number Plate Lamp
2581	20/25/30/35	44-003	Number Plate Lamp
2583	12/16/21/27	44-003	Number Plate Lamp
2584	12/16/21/27	44-003	Number Plate Lamp
2585	12/16/21/27	44-003	Number Plate Lamp

3. Look up the part number on the chart in this section for complete ADR information.

Simpler ADR Compliance

The 3rd edition ADR covers all vehicles and trailers, even those not subject to registration requirements such as very light trailers or 'box' trailers.

To simplify the ADR approval process for smaller manufacturers and individual home-builders, HELLA has made a consolidated Summary

of Evidence (SE) submission to the Federal Office of Road Safety (FORS). This submission covers all HELLA products that comply with 3rd Edition ADRs.

This catalogue lists both the HELLA and FORS Component Registration Numbers (CRN) beside each item in a quick reference ADR application

chart in this section.

HELLA provides specific ADR related lamp orientation and mounting requirements to enable customers requiring ADR compliance to simply quote the relevant CRN to the authorities (who maintain a central register), rather than undertake detailed SE submissions for each lamp function.

Warranty Information

STATEMENT OF WARRANTY

HELLA Australia Pty Ltd warrants all products from the date of purchase to an end-user for the first time and covers defects in materials and/or workmanship only, provided that the product is installed in accordance with our mounting instructions and by a qualified professional.

The benefits given by our warranty are in addition to other rights and remedies of consumers under law in relation to the products of which our warranty relates; and

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

WARRANTY PERIODS

Please refer to the general terms and conditions on our website www.hella.com.au for up to date information on specific warranty periods and conditions that may apply.

LIMITATION OF LIABILITY

HELLA Australia Pty Ltd liability is limited to repair, replace or settle by credit note at the discretion of HELLA Australia Pty Ltd.

The goods are supplied strictly on the terms and subject to the condition that the buyer has satisfied itself of their suitability for its intended purpose.

Information supplied and printed in catalogues, specifications or other details on the product shall not constitute guarantees for condition or durability.

This warranty does not cover:

- Any labour costs incurred in diagnosis, troubleshooting, removal or reinstallation of the product and failures related to installation nor does it cover any consequential damage, indirect or special loss (whether for loss of profit or otherwise) and damage or injury of any kind.
- Any expenses associated with the handling of claims.

- Claims that are attributable to the non-compliance of the vehicle manufacturer's production specifications, maintenance and or service policies.
- Claims as a result of any modifications and alterations to the product.
- Claims as a result of non-compliance to the assembly, service and operating instructions and/or any unfit or improper use, and/or wrong or negligent treatment, and/or normal wear and tear, contamination, results from accidents, insufficient or excessive electrical supply, subject to undue environmental conditions, accident or improper application.
- Railway applications.

CLAIMS SUBMISSION

When a HELLA product is suspected to be defective, the end-user must stop using the product and contact the original place of purchase or HELLA Australia Pty Ltd (contact details below) and provide the proof of purchase and a description of the defect. The end-user shall also promptly provide further information that may be requested with respect to the claim.

The credits officer will register the claim, organise pickup of the goods and a copy of the claim will be sent to the customer, this must be attached to the goods when returned to HELLA Australia Pty Ltd head office for assessment.
